Batch 2: the dormitory's door at the stair head

The Architect, 13 October 2026, for Godric. The ledger's line 5 (docs/architect/changes.md); the castle model, version 16; Godric's 1 on dormitory-sign-door-1013, already ruled. Red: what changes.

now, 8.14 pm: the Dormitory as it stands, the stair head open at the right (the newel's ball, the kerb)

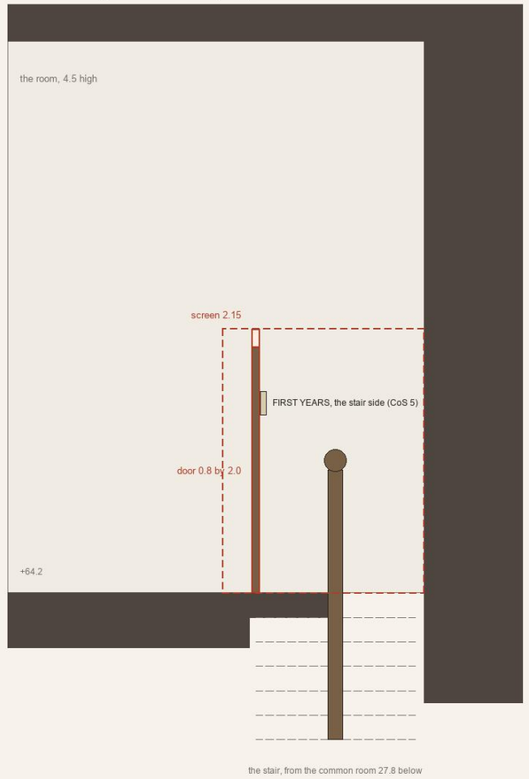

Plan at the floor, north up (1:100): the screen and its door (line 5)

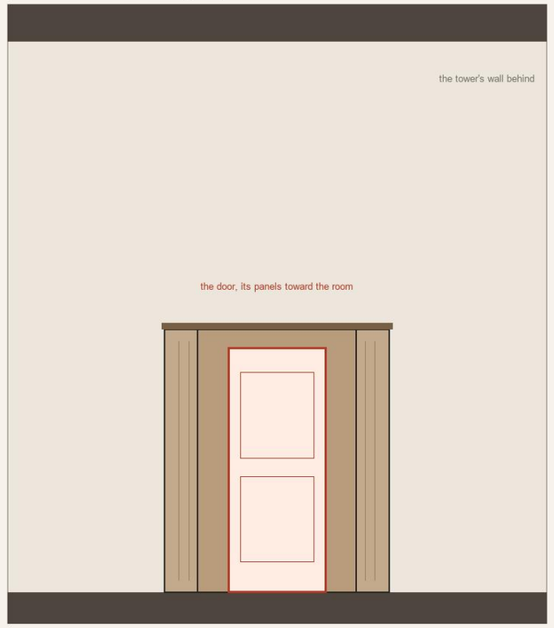

Harry's year's dormitory, 11.2 m across, its floor +64.2

0 1 2 3 4 5 m 1:100 (the plan)

Section through the stair head (1:50)

The screen from the room (1:50)

Line 5

A panelled screen 2.15 m high round the newel on the kerb's line, 0.92 m from its centre, three quarters of the circle; behind the newel it meets the tower's wall, since the newel stands 0.73 m inside it. Its door, 0.8 by 2.0, in the kerb's gap across its 1.30 m chord, 0.65 m from the newel toward the room, its threshold on the stair's top step, opening into the room; jambs 0.25 m each side; the year's sign on its stair side (FIRST YEARS, then SECOND YEARS, CoS 5). The bed at 53 stays 0.19 m clear of its hangings (the Dormitory's measure; 0.28 m to its 1.0 m frame on this plan). The stair head is no longer open. Placed, model 16 (dorm-stair-screen, dorm-door).

Godric's t1: on Christmas morning the twins fling it open and bound in (PS 12).

Batch 1 is wholly drawn and line 3 built on the shell (architect-batch1-1013-2010).

0 1 2 3 m 1:50 (the section and the screen), printed at A3
