The Great Hall at 1:200, for its lane, with its windows (1 of 2)

The Architect, 16 October 2026, for Godric. Drawn from the castle model, version 49 (great-hall, great-hall-doors, hall-cupboard); the tables, platform, staff table, stool and candles are Interiors' schedule, cited. Red: the windows, Godric's Try 1 (great-hall-window-n1 to n7, s1 to s7).

Plan at the floor, north up (1:200): the windows, Try 1

Section A, along the middle aisle, looking north (1:200)

What the Great Hall lane can rely on (model version 49)

The room 50 by 18 (x 15 to 65, y 51.5 to 69.5), clear 14.9 under floor 3's slab, floor 3 at +15.6: one answer, not two (ledger 12 and 23).

The doors: a vaulted passage 3.2 wide and 5.0 high through the 3 m wall between the halls, the leaves at its Entrance Hall face, swinging in there, never into the hall; the hall's own mouth an open arch on y 60.5, the middle aisle's line (Q16's 1, confirmed). The shell walks it from both halls.

The broom cupboard in that wall, its door on the Entrance Hall's side (ledger 3).

The walls: the north 2.5 thick (the front), the south 1.5 (the courtyard); the west end backs on the west range, the east on the passage. The windows in both long walls, seven a side in one tier (page 2; Godric's Try 1, 15 October 2026).

Drawn from Interiors' schedule, not decided here: the four tables (Gryffindor nearest the north wall), the platform 0.45 high with its three steps, the staff table at 1.20 with the gold chair on its west side, the stool, the candles' band 5.0 to 6.0.

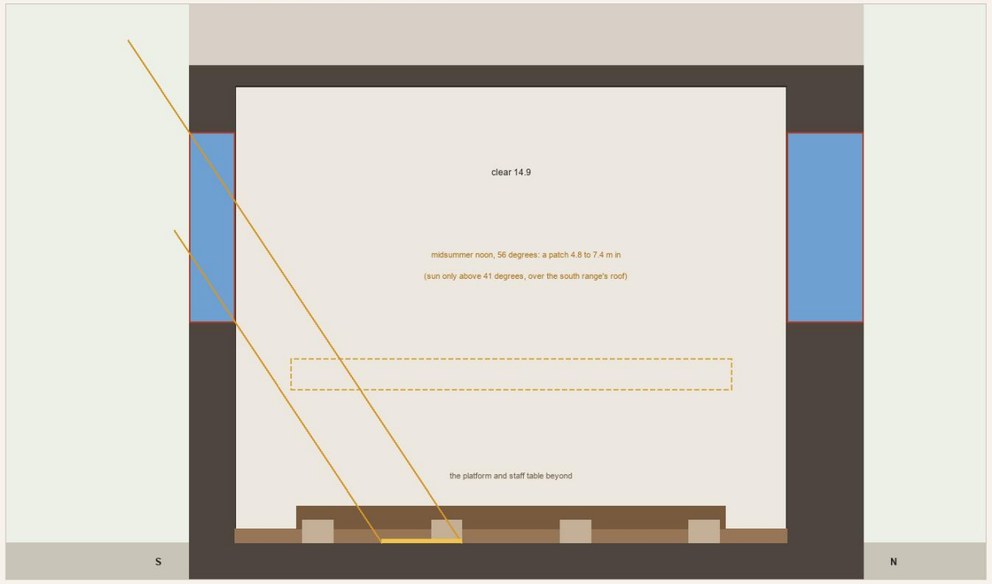

Held, not drawn: the door behind the staff table to a side chamber (beyond the boys' ceiling in books 1 to 3).

The Great Hall at 1:200, for its lane, with its windows (2 of 2)

The Architect, 16 October 2026, for Godric. Drawn from the castle model, version 49 (great-hall, great-hall-doors, hall-cupboard); the tables, platform, staff table, stool and candles are Interiors' schedule, cited. Red: the windows, Godric's Try 1 (great-hall-window-n1 to n7, s1 to s7).

Section B, across at x 41 through the middle lights, looking west (1:200)

The north face, the front lawn's (1:500); the south face the same without the breasts

The hall's windows: Godric's Try 1 (15 October 2026), in the model from version 27

Only the two long walls can take them: the west end backs on the west range, the east on the doors. The north wall faces the front lawn: sky light, and low sun only on summer evenings. The south wall faces the courtyard, where the south range's roof (+41.6, 33 m off) lets the noon sun in only above 41 degrees: mid-April to late August, at a latitude of 57 degrees north (ours; the books never name it).

One tier, seven a side on a 6 m bay, 2.4 wide, pointed and mullioned, sills 7.2, heads 13.4 under the 14.9 ceiling: great-hall-window-n1 to n7 and s1 to s7, numbered from the doors' end. Every sill clears the candles' band, so the look up reads candles, then windows, then the sky; a pier between each pair, where Interiors' trees stand in their tubs, six along each long wall. The owls come in through the upper lights (OotP 12, "the upper windows"; CoS 6, "a rushing sound overhead"); the high mullioned windows and their squares of sky are OotP 11, OotP 12 and HBP 9.

The faces drawing follows (architect-accreted, version 27): its hall row now one tier under the ceiling, the buttresses on the piers stopping under the library's sills, a chimney breast moved onto a pier.

The two other options, the faces' two tiers and five larger a side, stay on the 1449 sheet.

The hall's mouth from inside, looking east (1:100)
