Req 437 (d): the short-cut stair behind the hillside tapestry

Model version 26. The tapestry on the corridor's outer wall (0.45 m) opposite the inglenook, x 59.5. Gold box: recommended.

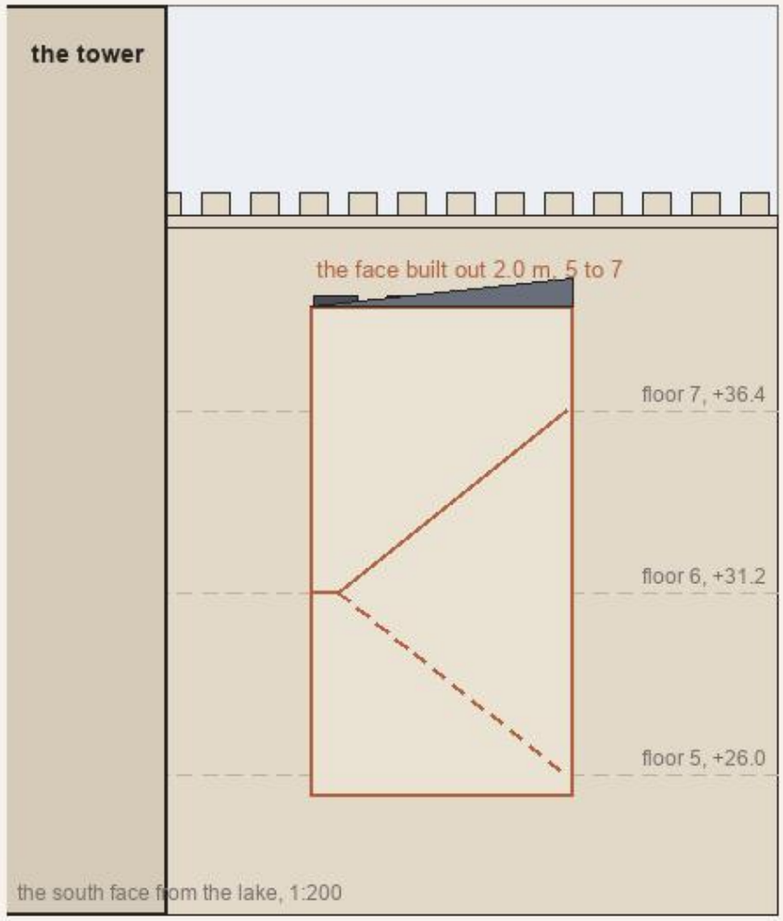

1: a slim stair turret on the face

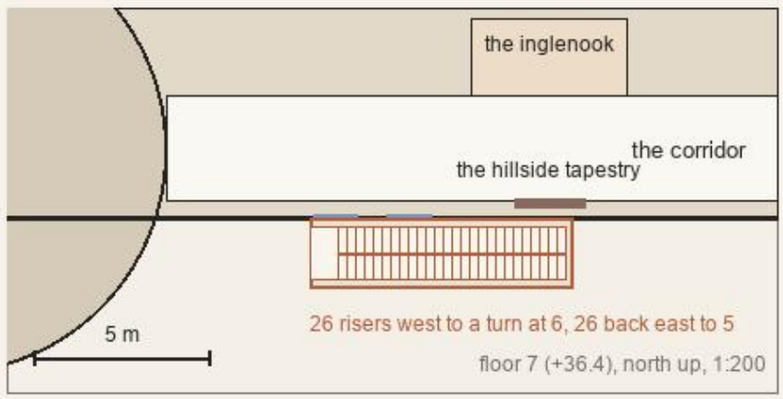

recommended

2: a straight stair in the wall, built out

Both go down two floors, 7 to 5 (10.4 m), as GoF 25's short-cut does, and come out on 5 behind a second tapestry, in the south range's fill (its room set in v27). The 0.45 m wall cannot hold a stair, so each stands outside.

1: a round turret 2.6 across, engaged on the face, corbelled out under 5, its cone just over the battlements. Small and plain from the lake; inside, a tight newel stair, the kind a castle hides everywhere.

2: the face built out 2.0 m from x 52.7 to 60.2, 5 to 7, the flights straight (Filch's look up the stair in GoF 25), a dogleg of two lanes side by side, but a slab 7.5 m long and 2.0 deep hung on the face for two floors, and it blinds the corridor's two built windows (run east instead, it blinds the landing's window).

Req 437 (a) needs nothing: the deep splayed reveals with cushioned seats are the common room's two windows, built (Q34b).
