The north range's back rooms: a way in (the sixth floor, and floors 1 to 7)

The Architect, 15 October 2026, for Godric, on the layout of model version 27 (tools/architect-layout-pdf.py). Godric's question: do pupils walk through the cupboards? No: the layout gives the back rooms no door at all, a gap. One stretch of the sixth floor, x 100.9 to 139.6, at 1:200, north up; red: what is new.

Now: the back rooms reached only through a cupboard (a gap)

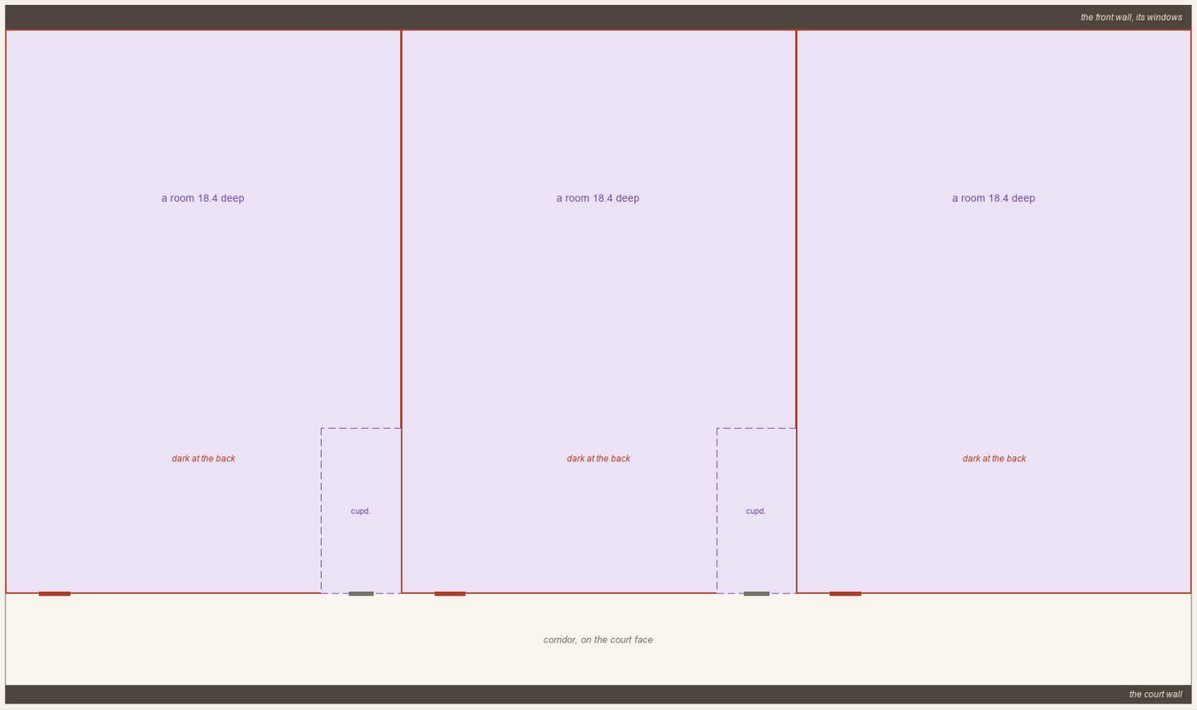

Try 1: a 2.0 m passage through the cupboards to each room

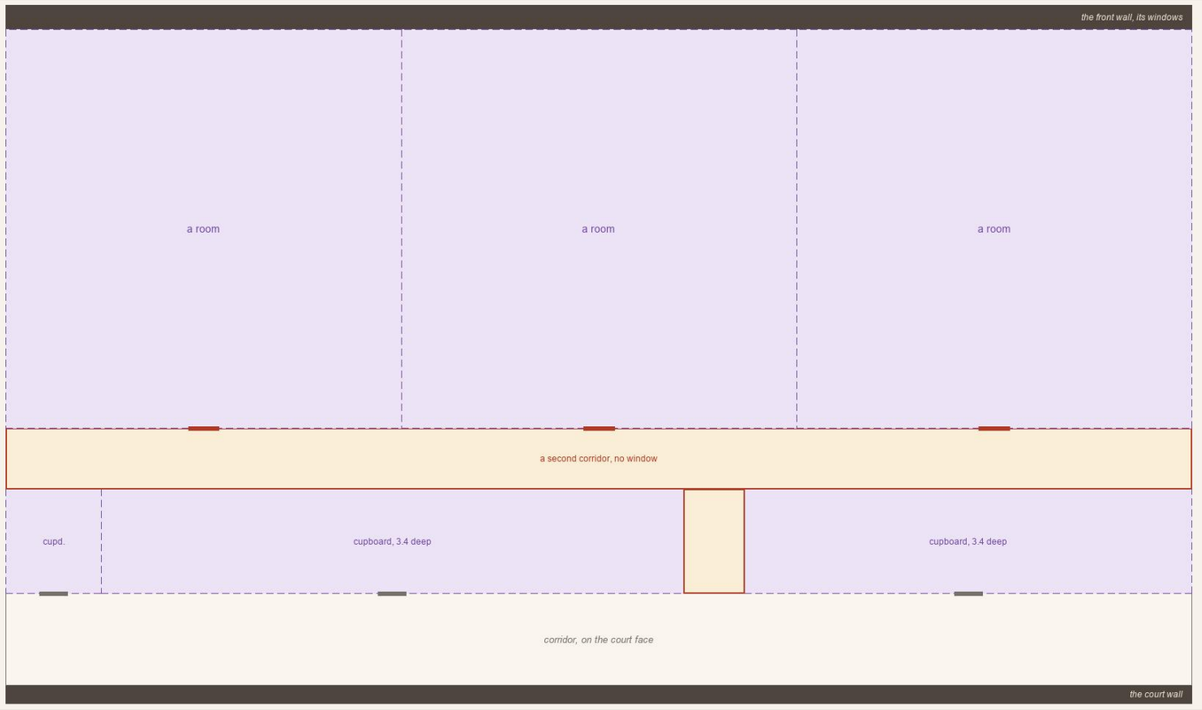

recommended

Try 2: the rooms deepened to the corridor, a cupboard built in

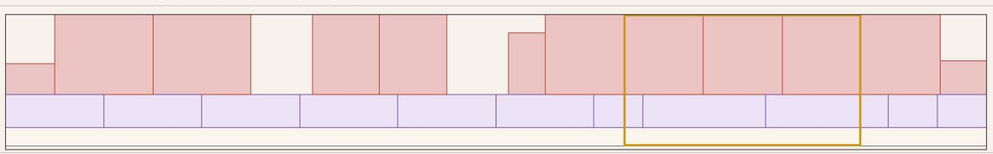

Try 3: a second corridor behind the cupboards

0 5 10 15 20 m 1:200 at A3 (the four plans)

The sixth floor's north range (1:1000): red, no way in; gold, the stretch

Try 1 recommended: the castle's own way to a room on the front, the model's passages to the Charms and Transfiguration classrooms. Every room keeps its front windows; the cupboards stay where no window reaches, each with its corridor door, 2 m shorter. The stair feet caught the same way (the Astronomy Tower's, the North and West Towers') get theirs too.

Try 2: rooms 18.4 m deep lit from the front only, the back half dark, and few cupboards. Try 3: a second corridor with no window, the walk doubled, the cupboards 3.4 m deep.

The same gap on every upper floor, rooms and stair feet with no way in: floor 1: 6, floor 2: 10, floor 3: 10, floor 4: 11, floor 5: 11, floor 6: 12, floor 7: 12. The ground floor, the cellars and the other ranges are fine. One batch fixes all seven on the answer.
