# Under 9.1: the south face from the boats, on its high crag

The Architect, 12 to 13 October 2026, for Godric. Drawn under his answers to Questions 6 to 9 (9.1: the high crag). Every face drawn from one set of pieces placed in plan, age by age (the history, revised from the precedents). Model version 21; ours unless a book line is named.

Godric's 9.1: real castles take their height from the rock (Edinburgh, Stirling, Dunnottar among the ten studied), so the castle stands on a high crag, "perched atop a high mountain" (PS 6). The lake lies at -46, 28 m lower; the old waterline is a rock ledge at -18 carrying the spurs, the batteries and the bay's foot; the harbour mouth opens at the new water. Windows few and irregular, slits low and big lights high, coursed rubble with quoins, battered feet on the old work, parapets at different heights on corbel tables. Held: Gryffindor Tower and its built windows, the corridor's windows on 7, the lead flat at +41.6 (req 198), the Astronomy Tower the highest (HBP 27). Under 235.1 the houses' towers rise for seven dormitories a stair: Gryffindor's two drums to 80.4, Ravenclaw to 77.1, the Astronomy Tower raised a stage to 83.2 (proposed).

Three marks to find from the boats: the lion on the keep (the oldest), the Tudor rose in the bay's gable, the date stone 1647 on the link.

# Under 9.1: the south face by age, each age in its colour

The Architect, 12 to 13 October 2026, for Godric. Drawn under his answers to Questions 6 to 9 (9.1: the high crag). Every face drawn from one set of pieces placed in plan, age by age (the history, revised from the precedents). Model version 21; ours unless a book line is named.

Each colour is an age (the key below), each label a piece of the history. Read it as a builder would: the founders' keep the darkest and most solid, its slits and the holes of its first timber hoardings; each later age raised a wall over its old battlements (they show as a line of blocked gaps), cut bigger windows into old work, hung turrets and oriels out on corbels where floor ran out, and capped its towers its own way: battlements, machicolations, cones, bell caps, an ogee lantern.

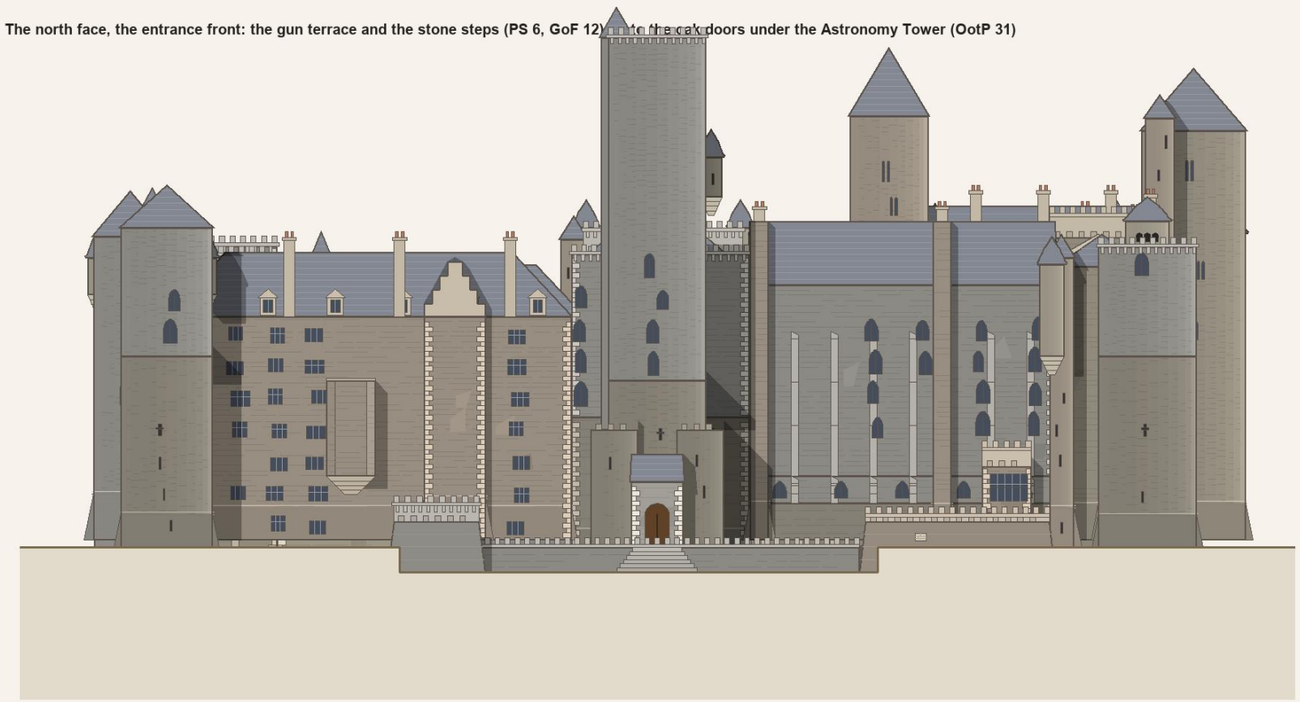

0 10 20 30 40 50 m — 1:500 printed at A3

- the founders, about 990
- Tudor, 1500 to 1600
- the first walls, 1100 to 1200
- the turret builders, 1600 to 1750
- the towers of the houses, 1250 to 1350
- the last additions, 1800 to 1900
- the high towers, 1400 to 1500

# Under 9.1: the other three faces, from the same pieces, 1:1000

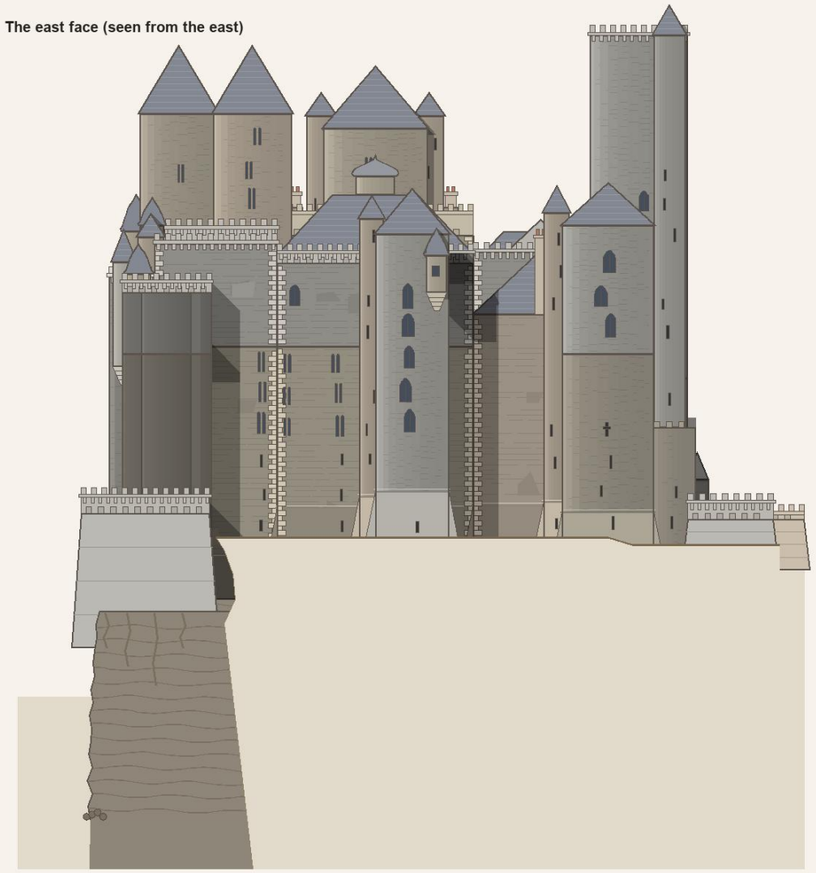

The Architect, 12 to 13 October 2026, for Godric. Drawn under his answers to Questions 6 to 9 (9.1: the high crag). Every face drawn from one set of pieces placed in plan, age by age (the history, revised from the precedents). Model version 21; ours unless a book line is named.

**The north face, the entrance front: the gun terrace and the stone steps (PS 6, GoF 12), to the oak doors under the Astronomy Tower (OotP 31)**
