The Great Hall at 1:200, for its lane, and one question: its windows (1 of 2)

The Architect, 15 October 2026, for Godric. Drawn from the castle model, version 26 (great-hall, great-hall-doors, hall-cupboard); the tables, platform, staff table, stool and candles are Interiors' schedule, cited. Red: the windows, option 1 drawn, not yet in the model.

Plan at the floor, north up (1:200): the windows as option 1

Section A, along the middle aisle, looking north (1:200)

What the Great Hall lane can rely on (model version 26)

The room 50 by 18 (x 15 to 65, y 51.5 to 69.5), clear 14.9 under floor 3's slab, floor 3 at +15.6: one answer, not two (ledger 12 and 23).

The doors: a vaulted passage 3.2 wide and 5.0 high through the 3 m wall between the halls, the leaves at its Entrance Hall face, swinging in there, never into the hall; the hall's own mouth an open arch on y 60.5, the middle aisle's line (Q16's 1, confirmed). The shell walks it from both halls.

The broom cupboard in that wall, its door on the Entrance Hall's side (ledger 3).

The walls: the north 2.5 thick (the front), the south 1.5 (the courtyard); the west end backs on the west range, the east on the passage. No windows in the model yet: page 2's question.

Drawn from Interiors' schedule, not decided here: the four tables (Gryffindor nearest the north wall), the platform 0.45 high with its three steps, the staff table at 1.20 with the gold chair on its west side, the stool, the candles' band 5.0 to 6.0.

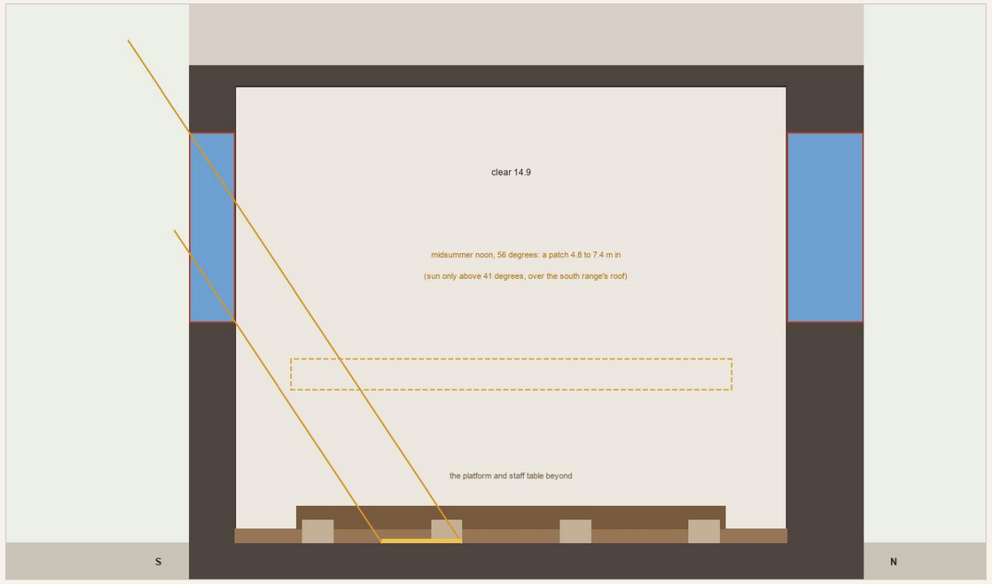

Held, not drawn: the door behind the staff table to a side chamber (beyond the boys' ceiling in books 1 to 3).

The Great Hall at 1:200, for its lane, and one question: its windows (2 of 2)

The Architect, 15 October 2026, for Godric. Drawn from the castle model, version 26 (great-hall, great-hall-doors, hall-cupboard); the tables, platform, staff table, stool and candles are Interiors' schedule, cited. Red: the windows, option 1 drawn, not yet in the model.

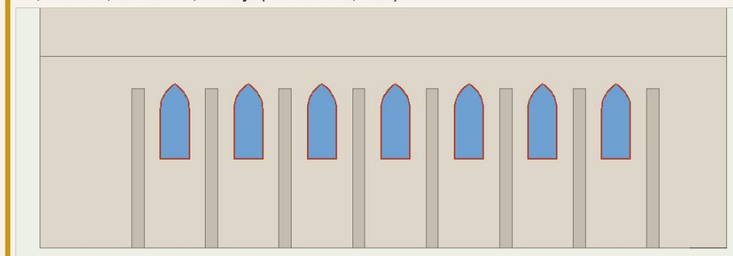

Section B, across at x 41 through the middle lights, looking west (1:200)

The hall's mouth from inside, looking east (1:100)

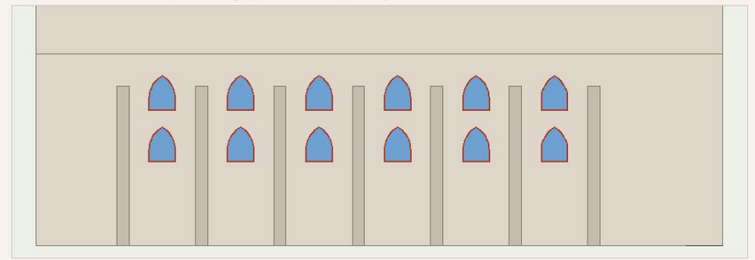

Q 1, 1: one tier, seven a side, 6 m bays (the north face, 1:500)

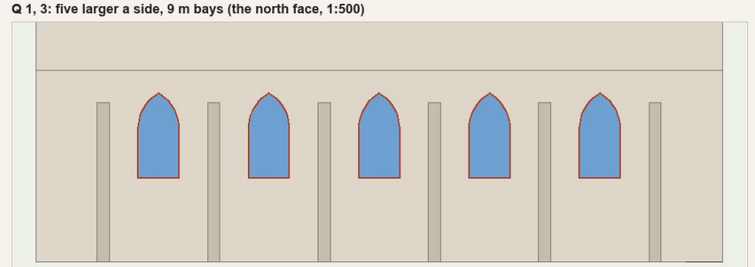

recommended

Q 1, 2: the faces' two tiers, 6.4 m bays (the north face, 1:500)

Q 1, 3: five larger a side, 9 m bays (the north face, 1:500)

Question 1: the hall's windows (none in the model yet)

Only the two long walls can take them: the west end backs on the west range, the east on the doors. The north wall faces the front lawn: sky light, and low sun only on summer evenings. The south wall faces the courtyard, where the south range's roof (+41.6, 33 m off) lets the noon sun in only above 41 degrees: mid-April to late August, at a latitude of 57 degrees north (ours; the books never name it).

1, recommended: one tier, seven a side on a 6 m bay, 2.4 wide, sills 7.2, heads 13.4 under the 14.9 ceiling. Every sill clears the candles' band, so the look up reads candles, then windows, then the sky; a pier between each pair takes one of Interiors' trees (its open question 1's option 1: every 6 m, x 26 to 56). The owls come in through the upper lights (OotP 12, "the upper windows"; CoS 6, "a rushing sound overhead").

2: the faces' two tiers kept, six a side on 6.4 m bays, lights at 6.8 and 11.0: busier, the lower lights among the candles' strays, the piers out of step with the trees.

3: five a side, 3.4 wide, on 9 m bays: grander and fewer, the piers out of step with the trees.

Either way the model takes the windows as great-hall-window-n1 to n7 and s1 to s7 (version 27), and the faces tool follows: its hall row at floor 2 (11.6 to 15.4) cuts the ceiling today.
