Question 8: the faces pushed

The Architect, 12 to 13 October 2026, for Godric. Drawn under 6.1 and 7.1, pending Godric's answers to Questions 6 and 7. Every face drawn from one set of pieces placed in plan, age by age (the history, revised from the precedents). Model version 5; ours unless a book line is named.

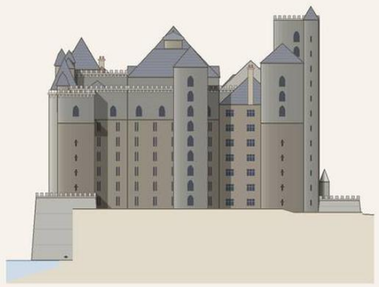

Canon, checked at the gate: Ravenclaw's "spiral staircase", climbed "in tight, dizzying circles" (DH 29); the Owlery "at the top of West Tower", "none of the windows had glass in them" (GoF 15); the head's "spiral staircase" that moves (CoS 11); the stone steps to the oak front doors (PS 6).

Now: the three faces as drawn at 11.08 pm on 12 October (architect-accreted-2308, page 4)

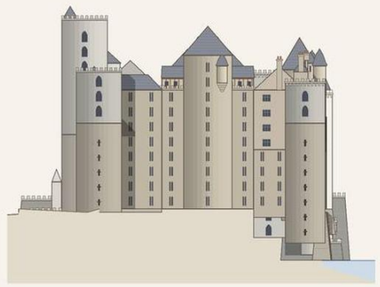

The north face, the entrance front: the gun terrace and the stone steps (PS 6, GoF 12) up to the oak doors under the Astronomy Tower (OotP 31)

The east face (seen from the east)

The west face (seen from the west)

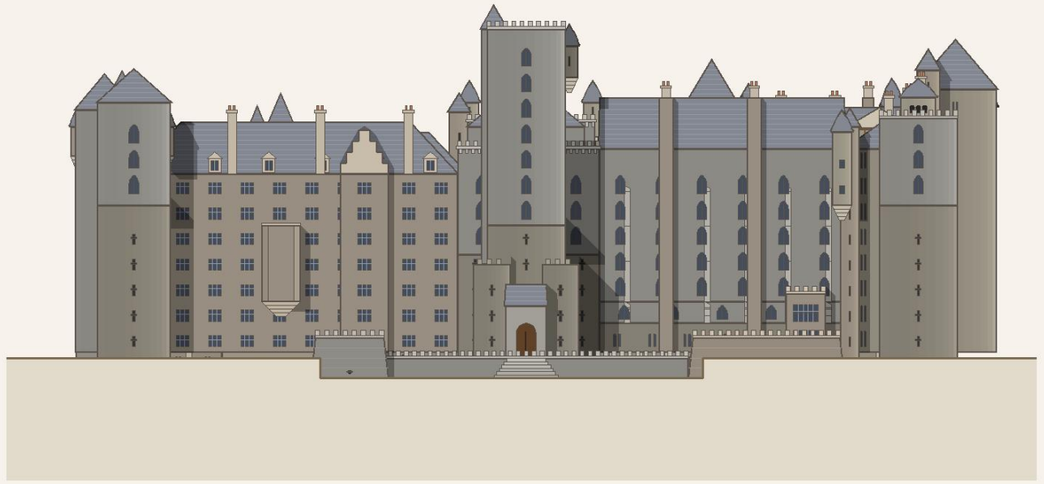

What the push adds: sixteen pieces, each with its age and what made it (the sections sheet's last page has every piece)

- gate-drum-w: tastes and purpose, the gate flanked by two drums, the one way in by land; the tower raised later half swallowed them
- gate-drum-e: tastes and purpose, the gate's other drum; the Astronomy Tower's stair later rose out of it
- spur: tastes and purpose, the 1540s brought heavier guns: a pointed bastion leaves no blind ground before the north-west curtain
- hall-bay: variation, the high table wanted light: a bay window at the dais end of the hall
- hall-breast-1: tastes and purpose, fires in the floors over the hall: a chimney breast up the north wall
- hall-breast-2: tastes and purpose, its pair, farther east
- nr-gable: variation, a great chamber wanted height: a crow-stepped cross gable breaks the long north roof
- north-stair: accretion, a stair turret in the North Tower's angle, so no old wall was cut
- dumb-stair: accretion, the head's moving spiral stair (CoS 11) in a turret of its own
- rav-stair: accretion, the long climb in tight, dizzying circles (DH 29) given its own turret
- wr-breast-1: tastes and purpose, fires in the west range: a chimney breast up the outer wall
- wr-breast-2: tastes and purpose, its pair, by the hall's end
- owl-lantern: tastes and purpose, the owls' way in: a lantern of unglazed openings on the West Tower's top (GoF 15)
- dumb-bart: expansion, a bartizan on the head's tower, a seat over the grounds
- astro-watch: expansion, a watch turret corbelled out for the lookout, kept below the stair's cap
- lake-stair: restoration, a turret rising past the parapet, the restorers' picturesque

And the rock's texture on the east and west faces: the knuckle under the south-west drum, the ledges east of the keep, strata and fissures (proposed).

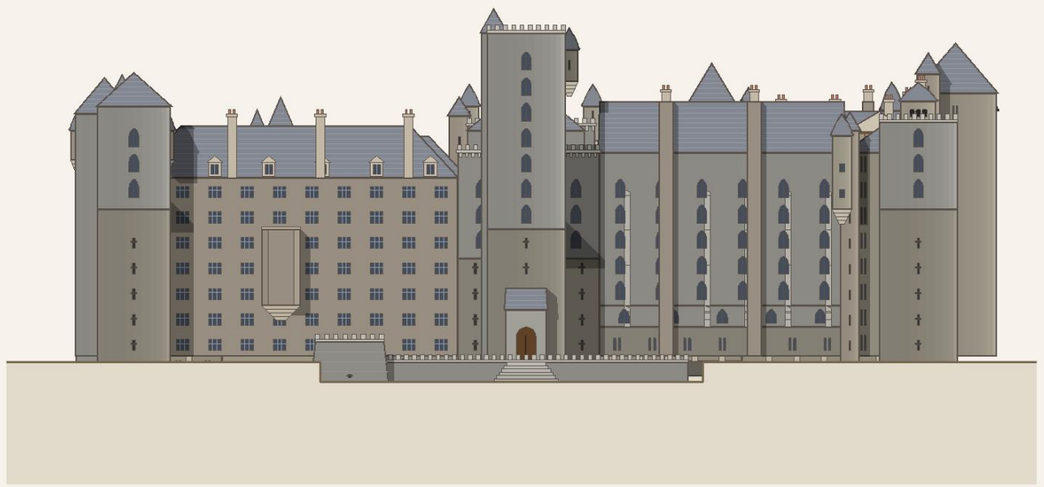

8.1 The faces pushed as drawn (every page after this one)

Every tower its turrets and outcrops, and the entrance front told: the gate's two old drums half swallowed by the Astronomy Tower, a gun bastion of the 1540s, a bay at the high table's end, a crow-stepped cross gable through the north roof, chimney breasts. Your 10.23 pm answer: facade dynamism, outcrops of every size, defences that still tell what they were for.

recommended

8.2 The towers pushed, the entrance front kept calm

The turrets, bartizans, lantern, stair turrets and chimneys only; the front as at 11.08 pm, no drums, no bastion, no bay, no cross gable. Quieter, but the front the boys arrive at tells less.

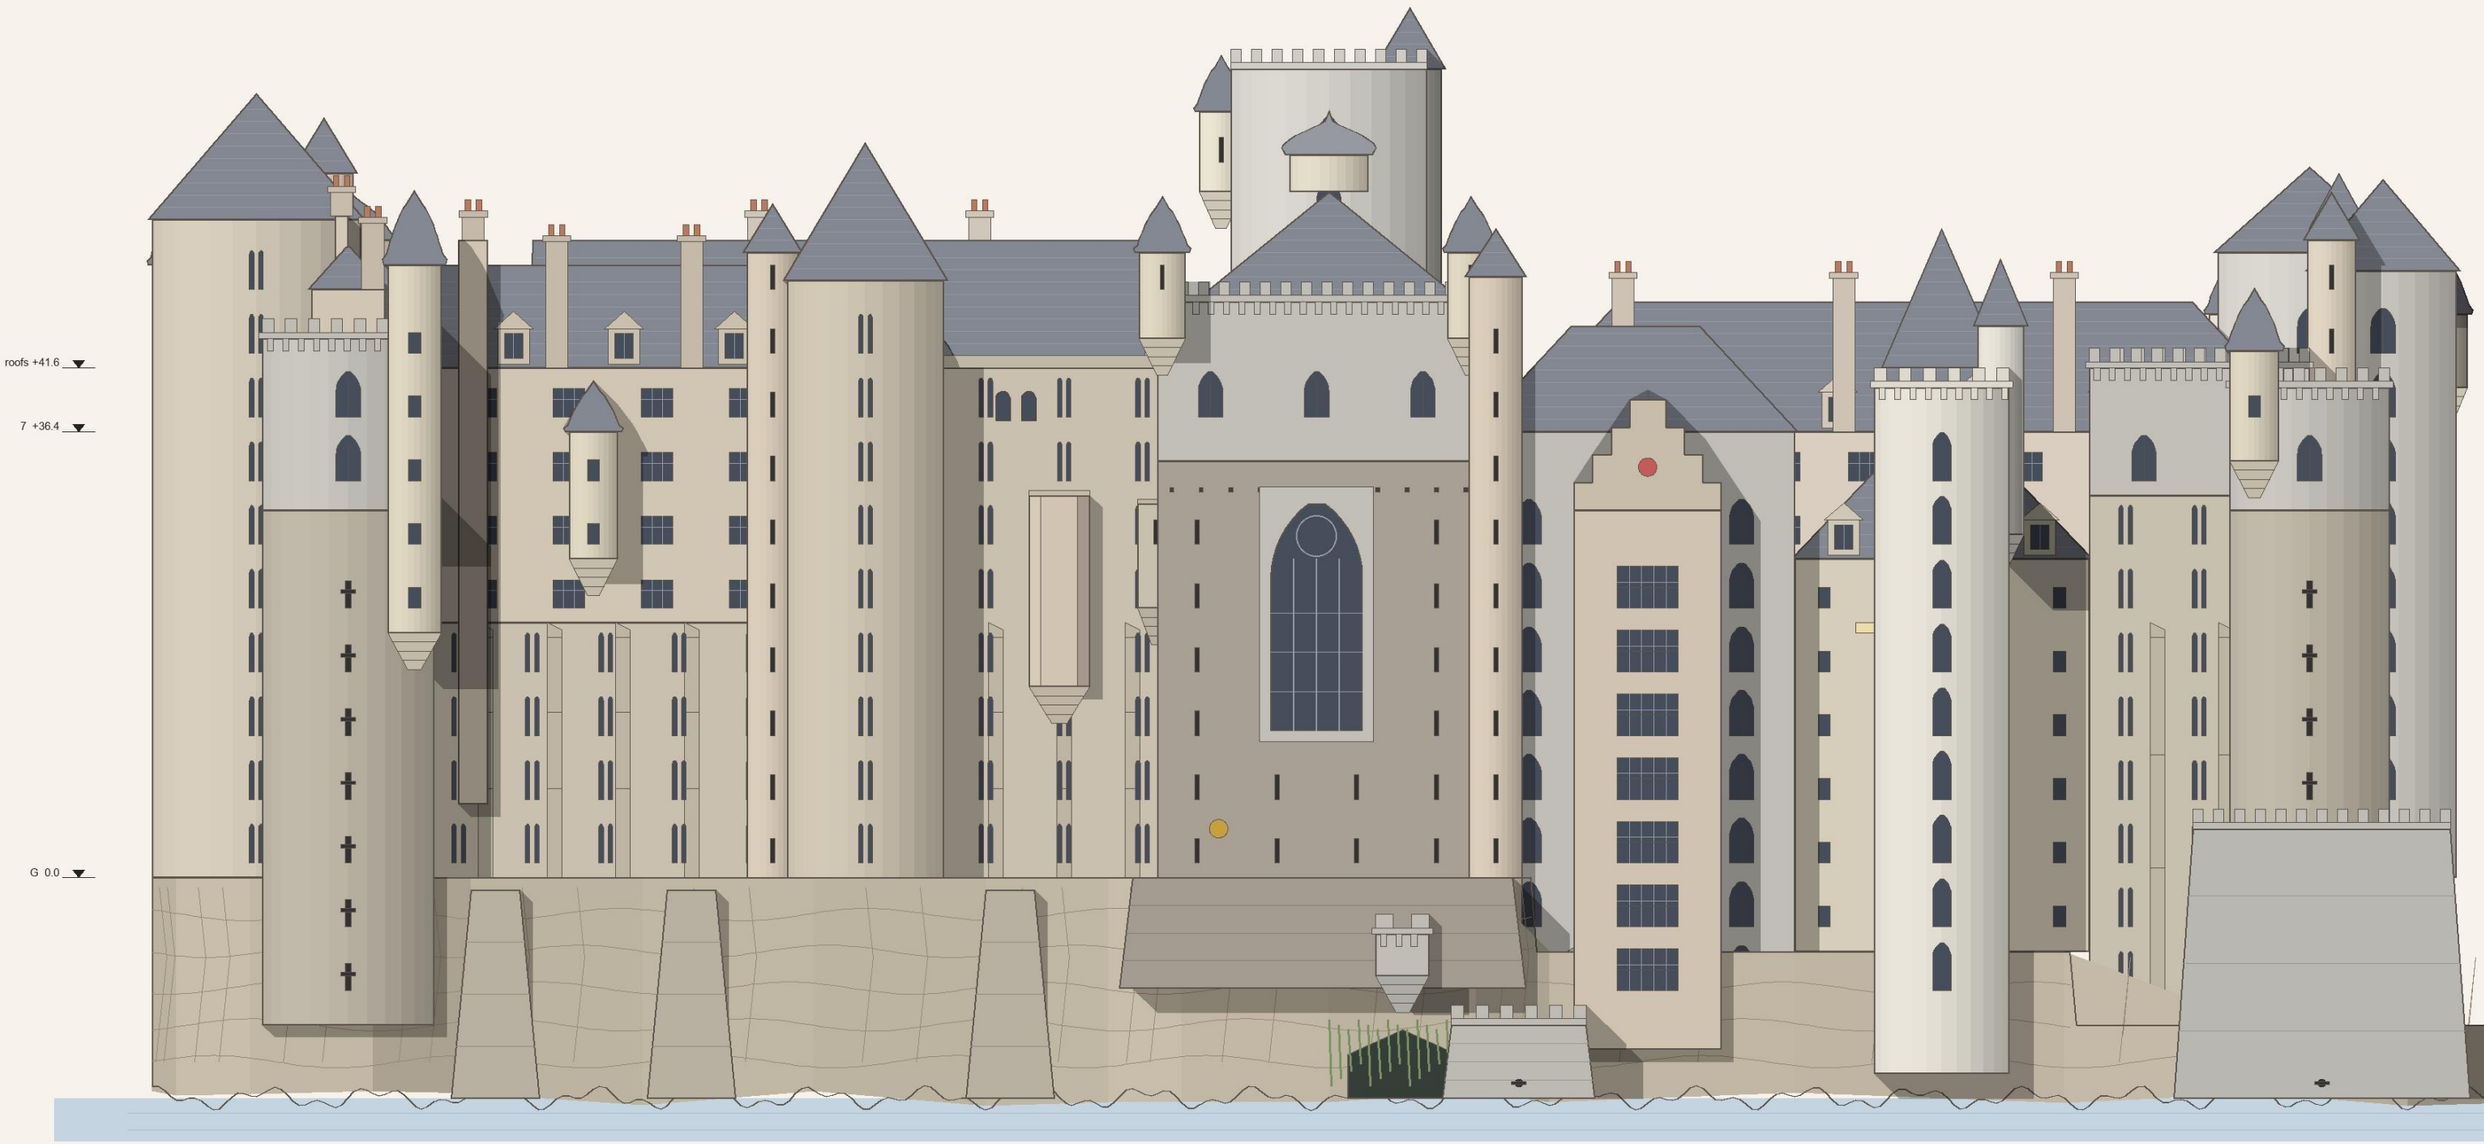

the north face, the entrance front, 1:1250 at A3 (ours, proposed)

Under 6.1: the south face from the boats, in weathered stone

The Architect, 12 to 13 October 2026, for Godric. Drawn under 6.1 and 7.1, pending Godric's answers to Questions 6 and 7. Every face drawn from one set of pieces placed in plan, age by age (the history, revised from the precedents). Model version 5; ours unless a book line is named.

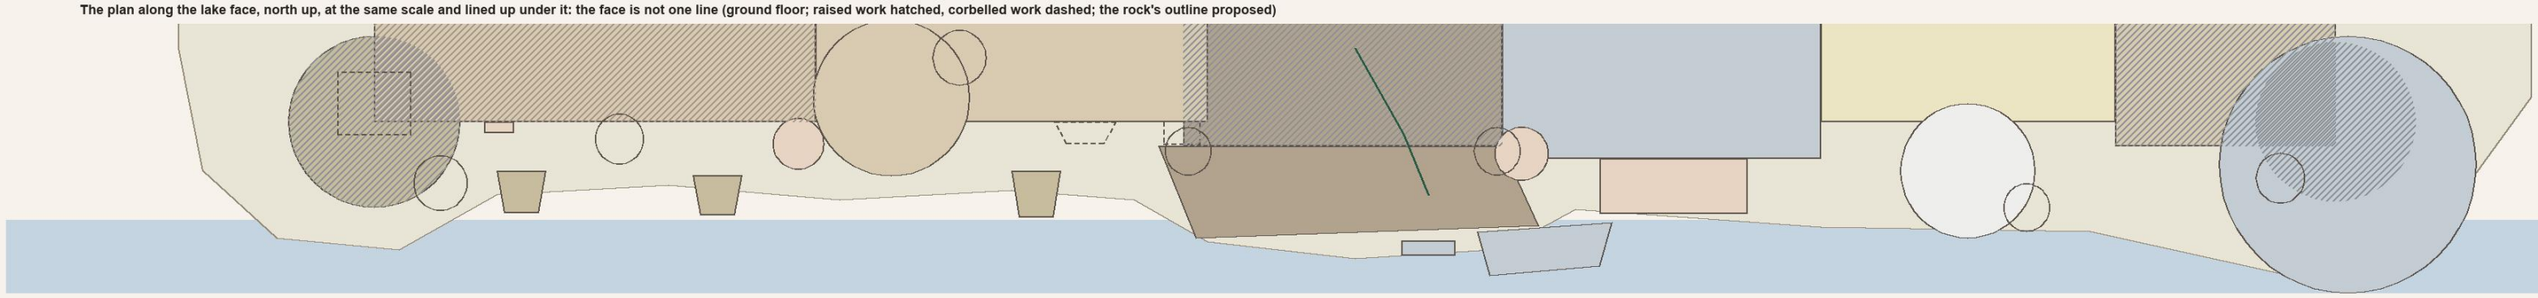

Drawn far to near from the pieces in plan, so towers stand in front of ranges, roofs show behind roofs and every piece casts its shadow on what stands behind it. The face is no longer one line: the keep stands out on its prow over the harbour, the hall range and its crow-stepped bay step down the ledges on vaults, the lake tower stands in front of the lower link, turrets cling where floor ran out, and the old battlements still show inside every raised wall. Held: Gryffindor Tower and its built windows, the corridor's windows on 7, the lead flat east of the tower at +41.6 (req 198), the Astronomy Tower the highest (HBP 27), nothing new above Gryffindor's cone at +60 but the stair hall's lantern (+62, behind).

0 10 20 30 40 50 m 1:500 printed at A3

Three marks to find from the boats: the lion on the keep (the oldest), the Tudor rose in the bay's gable, the date stone 1647 on the link.

The plan along the lake face, north up, at the same scale and lined up under it: the face is not one line (ground floor; raised work hatched, corbelled work dashed; the rock's outline proposed)

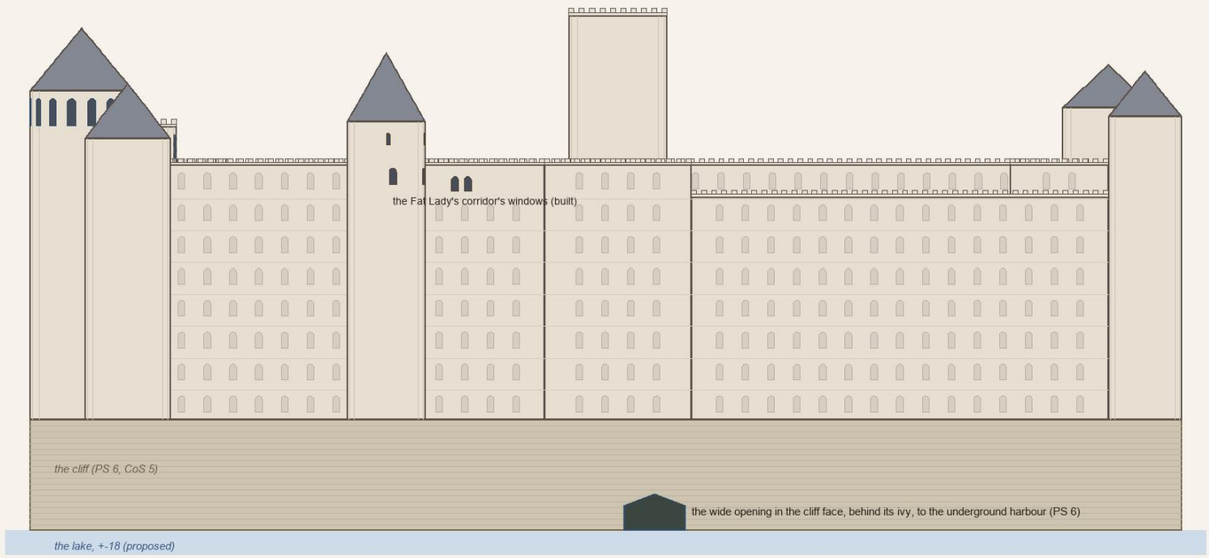

Question 6: where the castle began

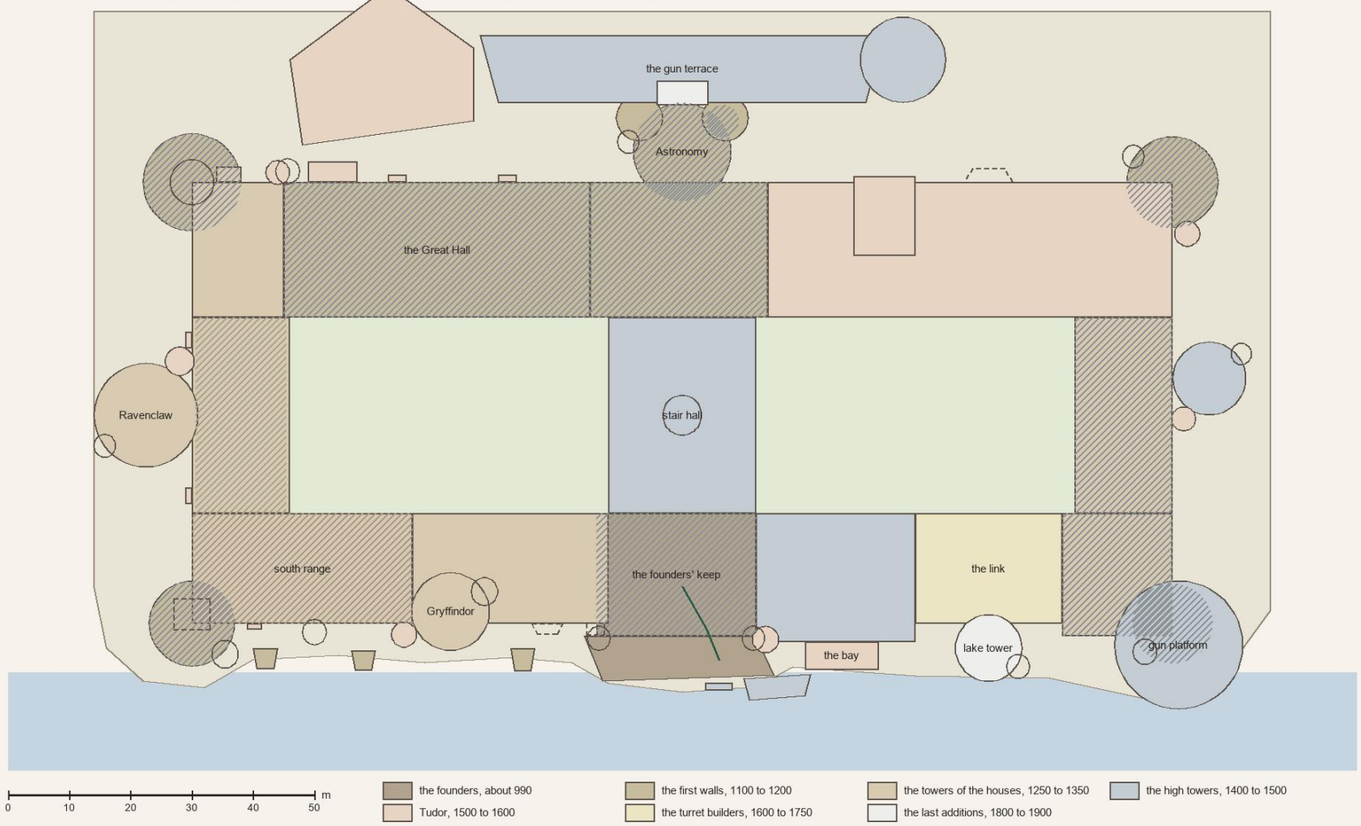

The Architect, 12 to 13 October 2026, for Godric. Drawn under 6.1 and 7.1, pending Godric's answers to Questions 6 and 7. Every face drawn from one set of pieces placed in plan, age by age (the history, revised from the precedents). Model version 5; ours unless a book line is named.

Canon, checked at the gate: Hogwarts "was founded over a thousand years ago", its four founders "built this castle together, far from prying Muggle eyes" (CoS 9); the harbour under the cliff behind its ivy (PS 6). Everything else is ours.

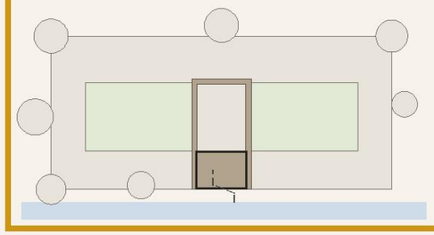

Now: the south face as it stands in the model (Question 5's "now"), 1:1000

Under 6.1: what each age built, ground floor, 1:1000. Raised in a later age: hatched in that age's colour; corbelled out: dashed. The rock's outline is proposed.

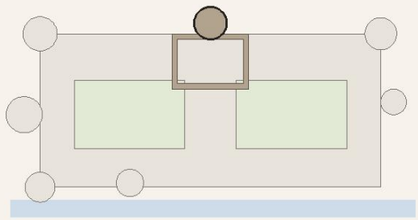

6.1 The founders' keep on the cliff, over the hidden harbour

A refuge reached from the lake by a passage in the rock, far from Muggle eyes (CoS 9): the boats' way in (PS 6) is the founders' own. Their walled ward became the stair hall's well.

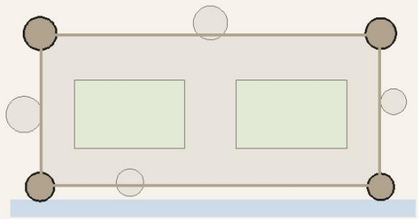

recommended

6.2 A gate keep at the front, grown into the Astronomy Tower

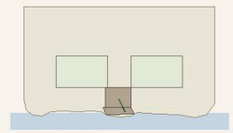

The highest tower is the oldest; the castle grew south to the cliff. The lake front is then all later work, and the harbour a later cut.

6.3 Four towers, one for each founder, joined by walls

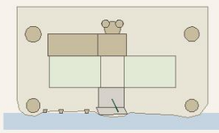

A square castle from the first day, the houses' towers the founders'. But two houses live below ground, and a square start reads as built at once.

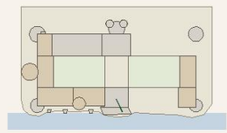

The growth, age by age (what stood before each age in grey)

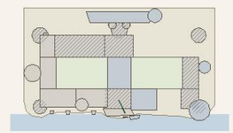

the founders, about 990

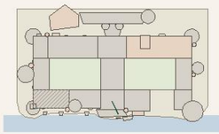

the first walls, 1100 to 1200

the towers of the houses, 1250 to 1350

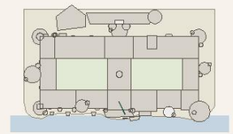

the high towers, 1400 to 1500

Tudor, 1500 to 1600

the turret builders, 1600 to 1750

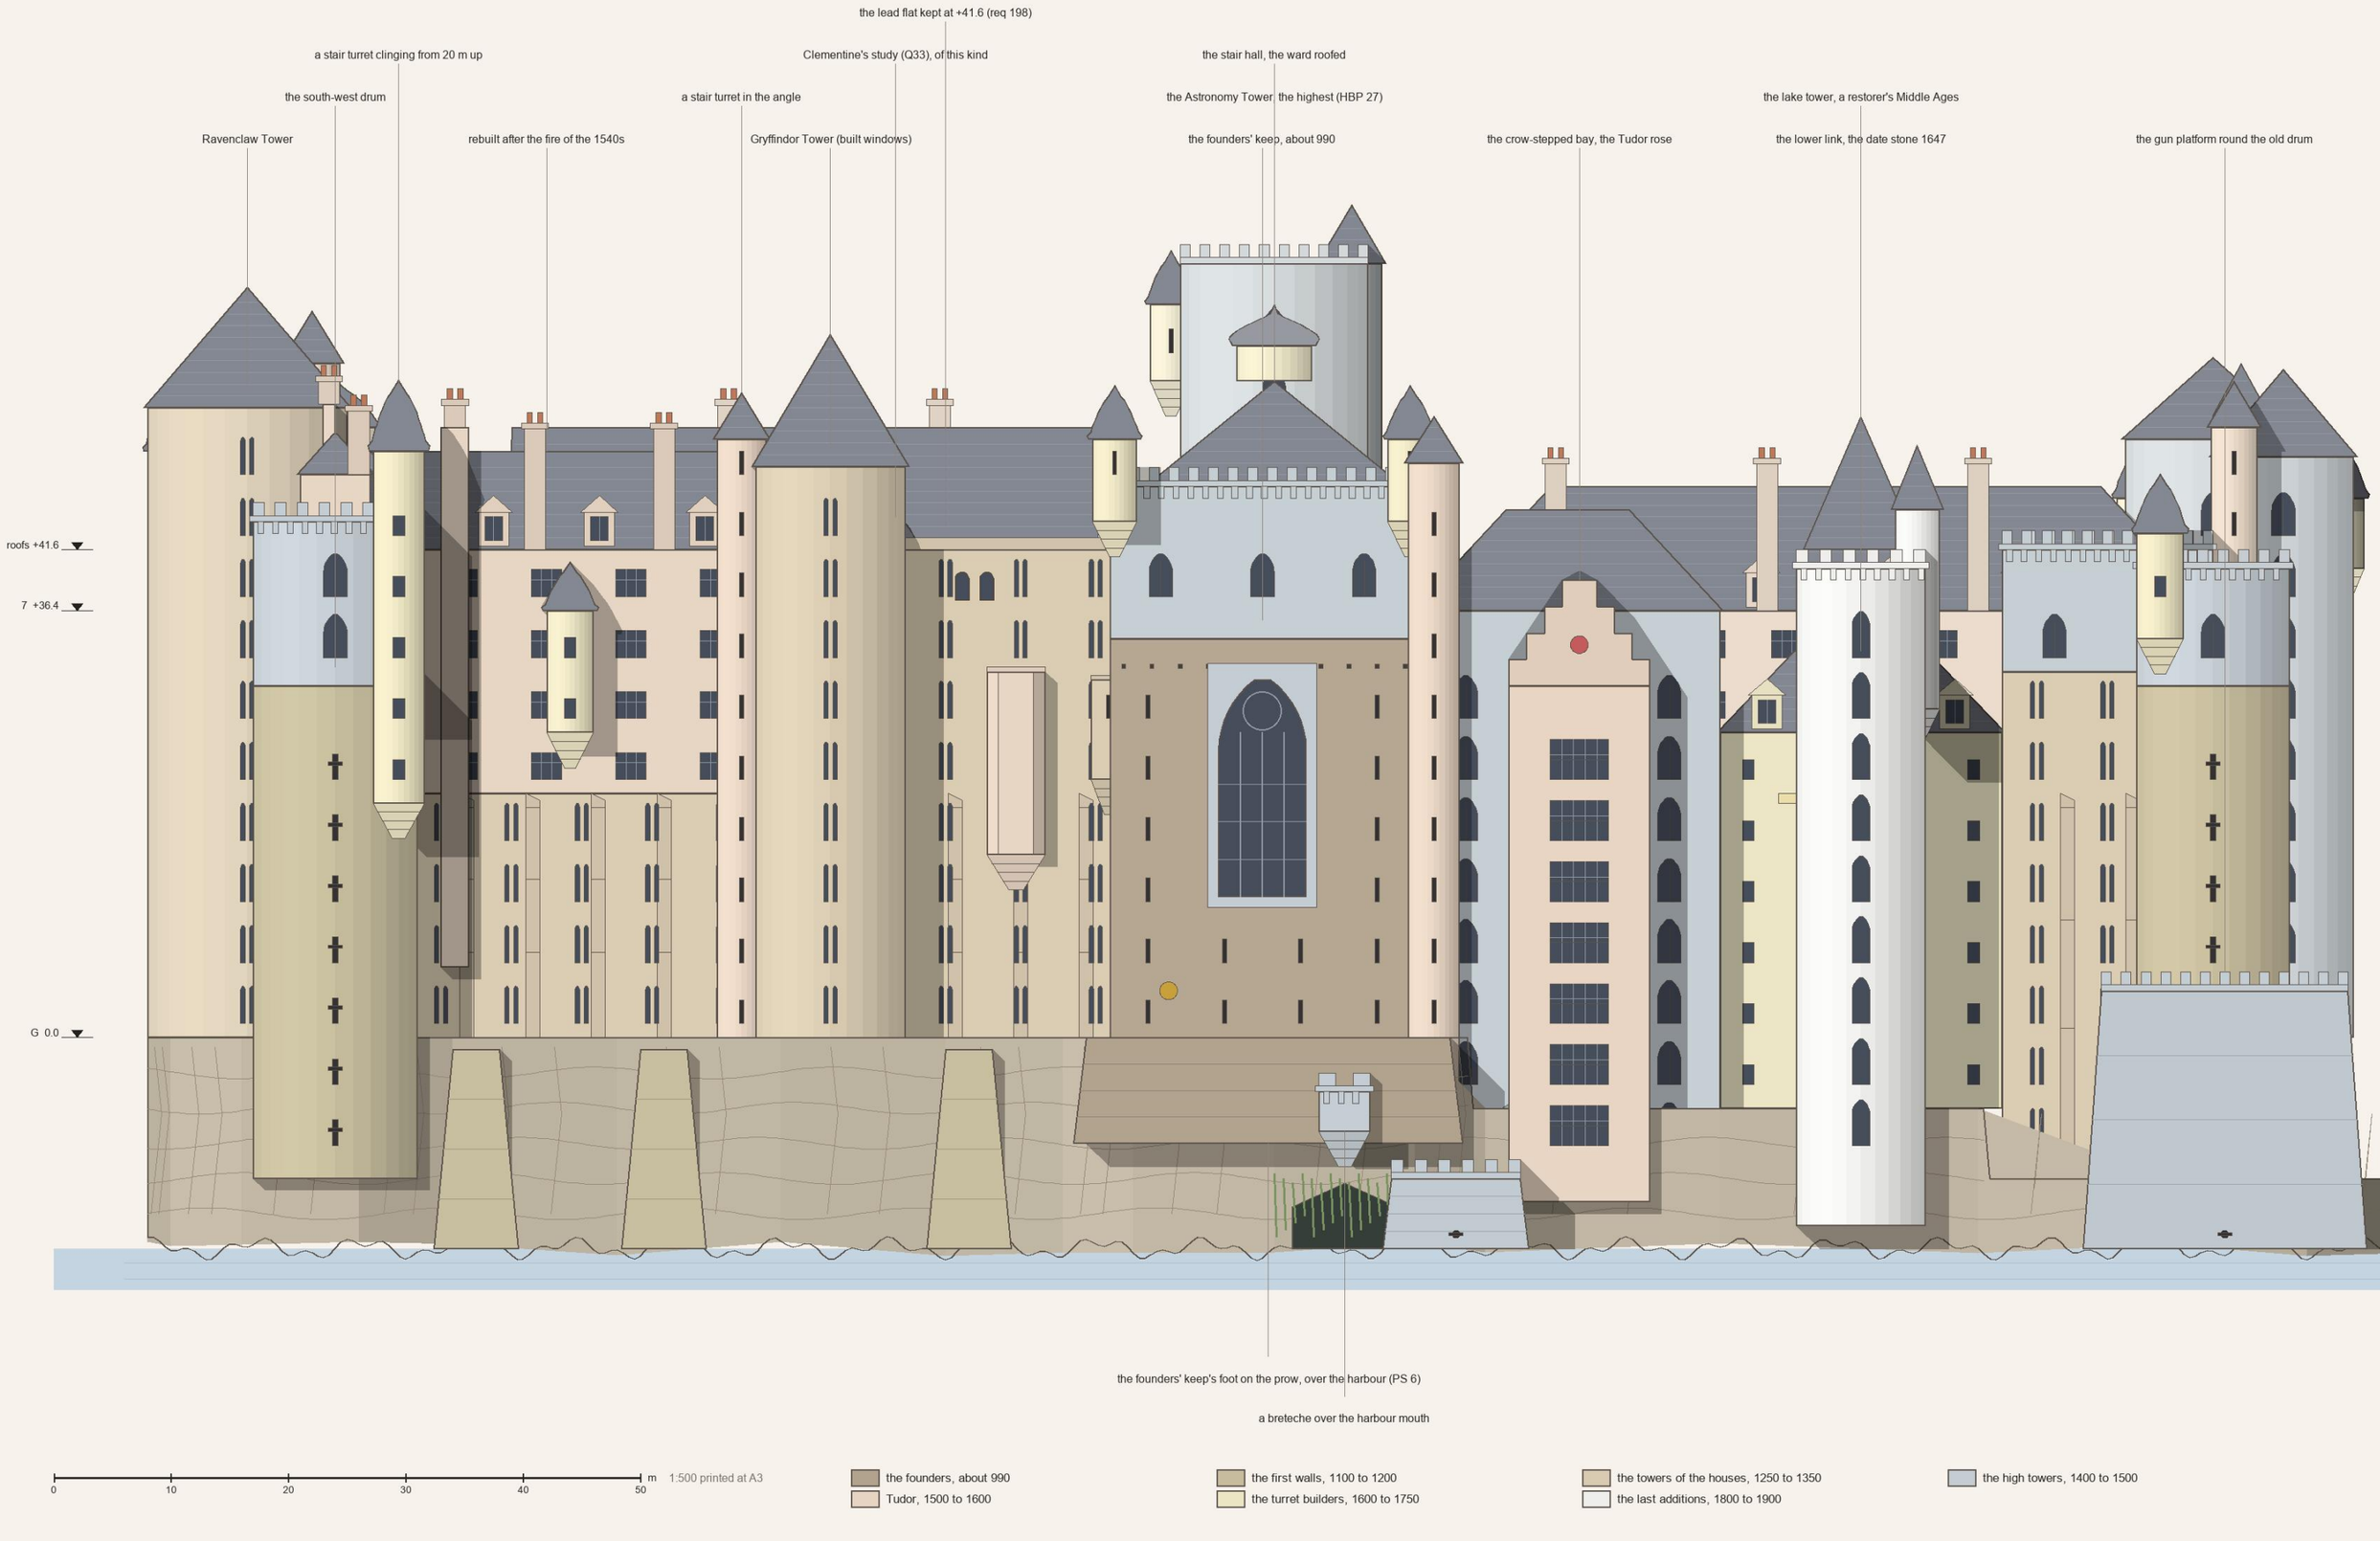

the last additions, 1800 to 1900

Under 6.1: the south face by age, each age in its colour

The Architect, 12 to 13 October 2026, for Godric. Drawn under 6.1 and 7.1, pending Godric's answers to Questions 6 and 7. Every face drawn from one set of pieces placed in plan, age by age (the history, revised from the precedents). Model version 5; ours unless a book line is named.

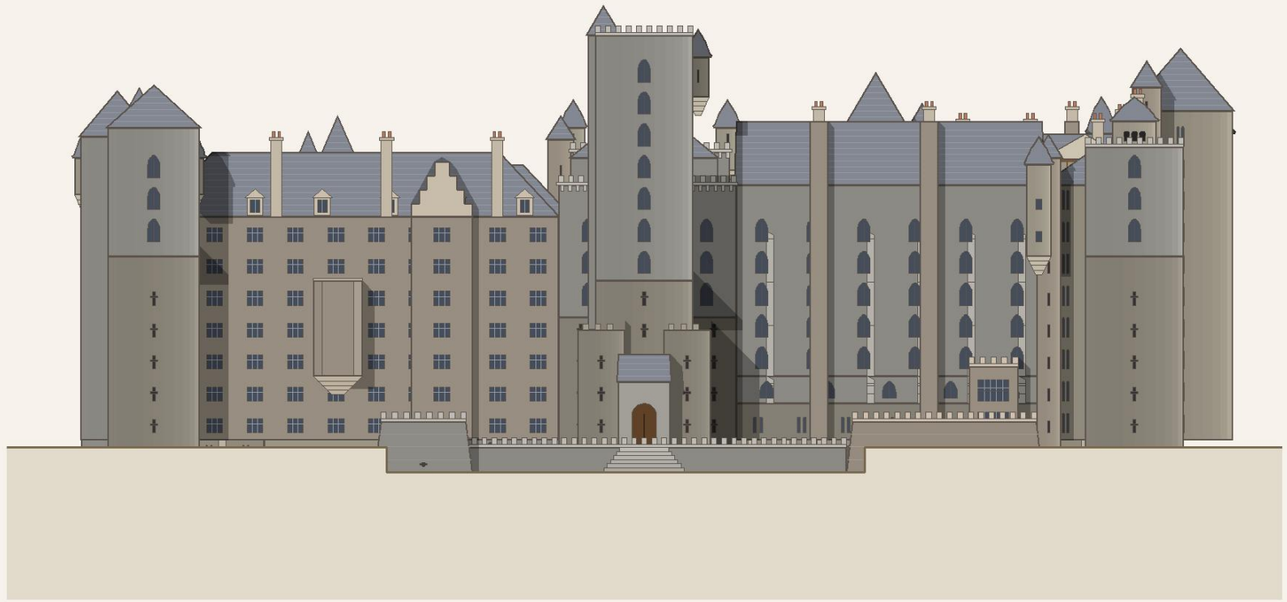

Each colour is an age (the key below), each label a piece of the history. Read it as a builder would: the founders' keep the darkest and most solid, its slits and the holes of its first timber hoardings; each later age raised a wall over its old battlements (they show as a line of blocked gaps), cut bigger windows into old work, hung turrets and oriels out on corbels where floor ran out, and capped its towers its own way: battlements, machicolations, cones, bell caps, an ogee lantern.

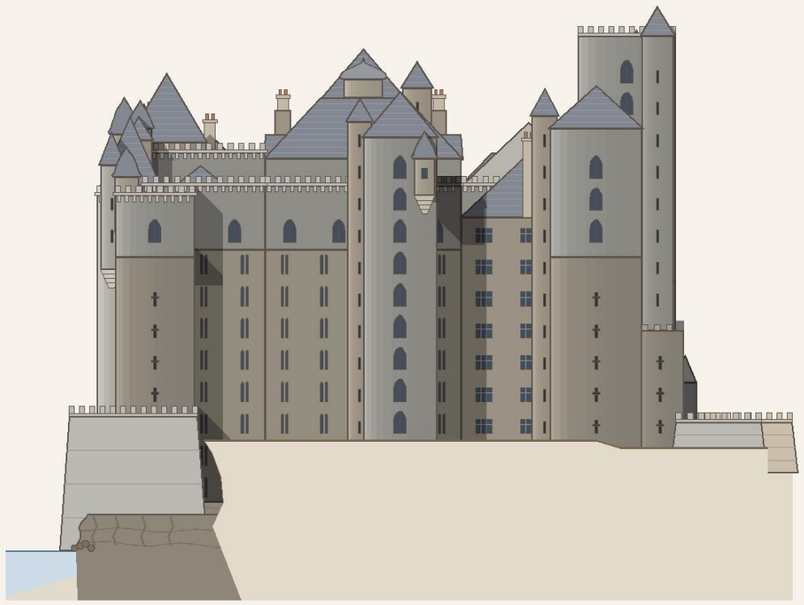

Under 6.1: the other three faces, from the same pieces, 1:1000

The Architect, 12 to 13 October 2026, for Godric. Drawn under 6.1 and 7.1, pending Godric's answers to Questions 6 and 7. Every face drawn from one set of pieces placed in plan, age by age (the history, revised from the precedents). Model version 5; ours unless a book line is named.

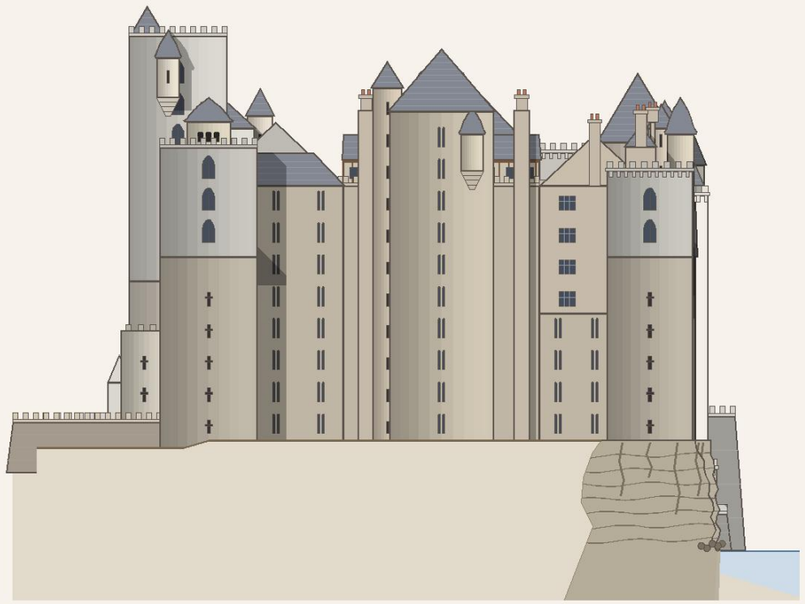

The north face, the entrance front: the gun terrace and the stone steps (PS 6, GoF 12) up to the oak doors under the Astronomy Tower (OotP 31)

The east face (seen from the east)

The west face (seen from the west)
