The look up and down: the den, the Great Hall, the stair hall

The Architect, 13 October 2026, for Godric. docs/architect/vertical-views.md; the castle model, version 16. Eye 1.35. Grey: where the look rests. Red: how far a drag may tilt, the frame's 42 degrees shaded about each. Gold: what each limit must show.

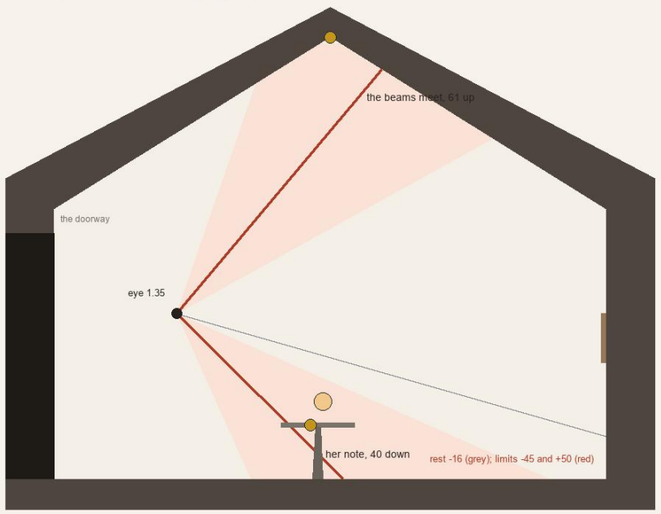

now, 8.53 pm: the den as it stands: her note below the frame, and no drag up or down

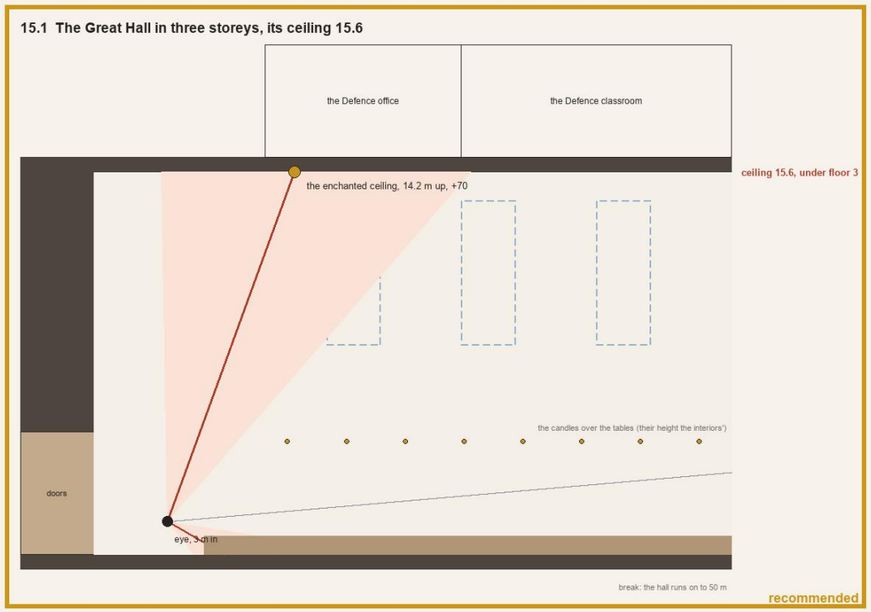

now, 8.54 pm: the stair hall in the shell at its present up limit, about 14 degrees

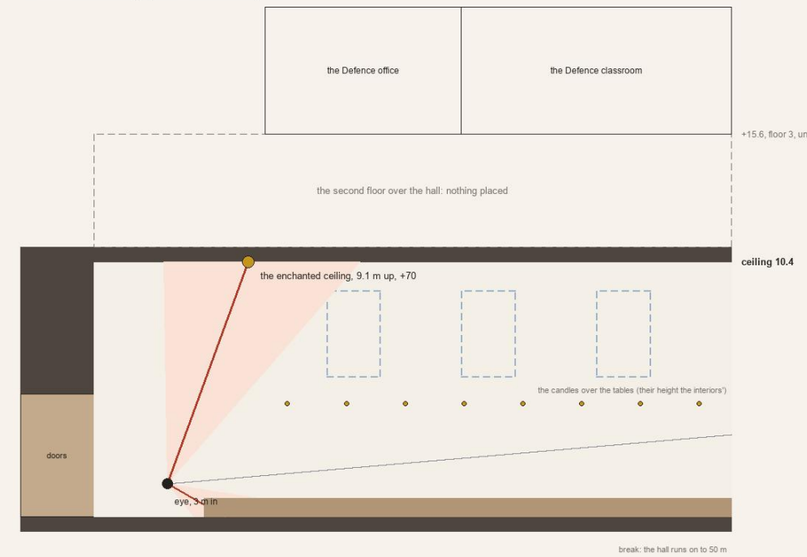

The den, cut on his line of sight (1:50)

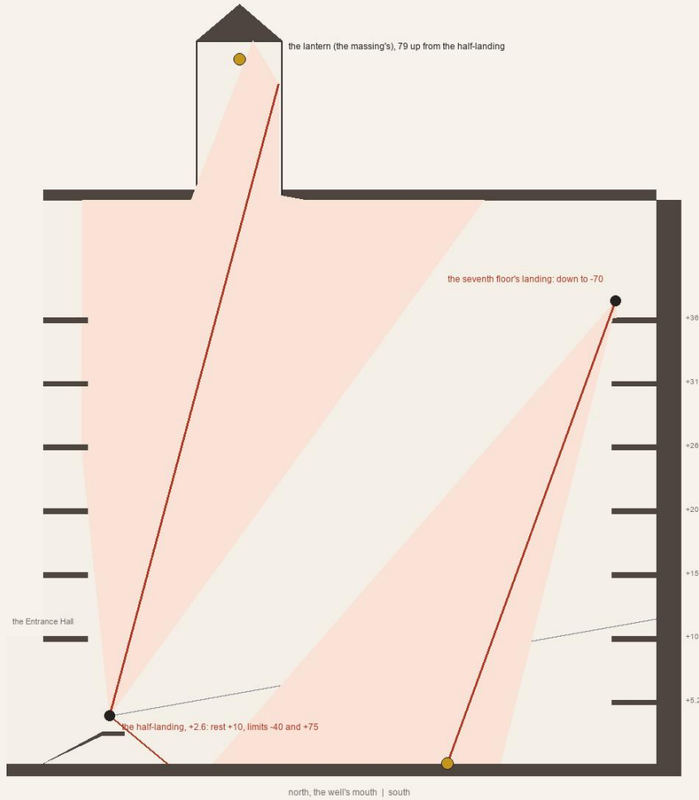

15.1 The Great Hall in three storeys, its ceiling 15.6

15.2 In two storeys, the model now, 10.4

The stair hall, cut north-south through the shaft (1:500)

Question 15, the Great Hall's height

The model has it rising through two storeys (10.4). The layout puts nothing on the second floor over it, only the Defence office and classroom on the third (+15.6), so a hall of three storeys, its ceiling at 15.6, displaces nothing. Recommended: the high windows (OotP 11) stand above the tables, the ceiling is half again as far to look up to from the doors, and 50 by 18 by 15.6 is a hall's proportion. It is the Architect's own ledger line once ruled. The look is +70 up either way.

The rows

The den: rest -16, down -45 to her note (40 down), up +50 to the beams (61 up); today it has no drag up or down. The stair hall: the awe stand is the marble staircase's half-landing, open overhead; up +75 to the lantern (79 up); from the well's mouth the first landings roof it (up +40). Every landing: down -70. The other rooms are in the table, with rows to their lanes; the drag itself is Interaction's.

0 1 2 3 m 1:50 (the den)

0 5 10 15 20 m 1:250 (the hall)

0 5 10 15 20 m 1:500 (the stair hall), at A3
