Req 235: a dormitory level per year in every house

The Architect, 13 October 2026, for Godric (your voice note, 8.45 am). Plans north up at 1:200, sections at 1:500 on one datum (heights above the castle's datum; the seventh floor +36.4). Red dashed: as built now. Nothing here is built yet.

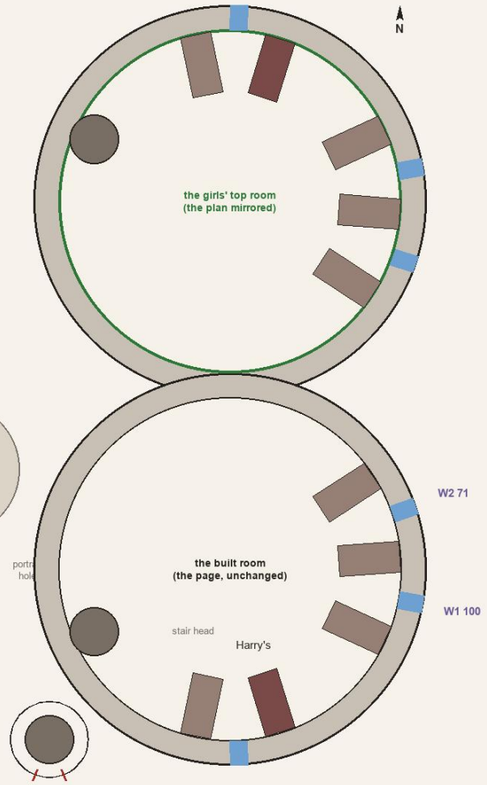

Canon, at the gate: "Percy directed the girls through one door ... and the boys through another. At the top of a spiral staircase" (PS 7); "right to the top ... their old dormitory, which now had a sign on it saying SECOND YEARS" (CoS 5); "their own dormitory, which was situated at the top of the tower" (GoF 12); running down the stair, "Doors opened behind them" (PoA 13); the girls' stair (OotP 17). Ravenclaw: "a door that led, he guessed, to dormitories above" (DH 29). Hufflepuff: the basement near the kitchens (HBP 21). Slytherin: under the lake (DH 23).

The common room's level, +36.4

Green ring: the girls' drum (proposed), 12 m north, behind the tower from the lake, sharing a stretch of wall; it rises from the south range. 1:200.

The top dormitory level (235.1), +64.2

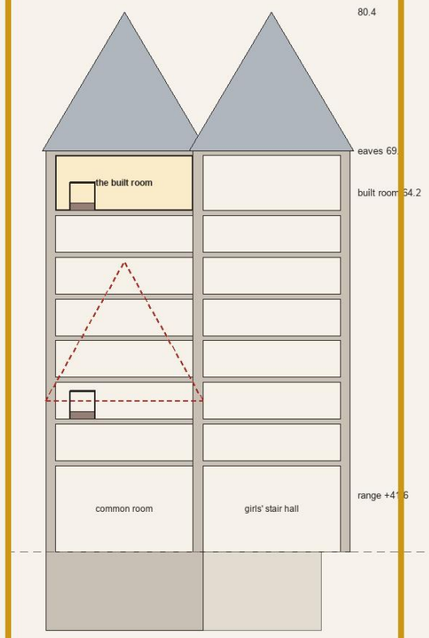

Inset, lower left: on the six levels below the top, each stair walled in, a door (red) into each room (PoA 13).

Now (9.22 am): the built room, from the stair head

Under 235.1 this room is the same, 20.4 m higher: W1 and W2 look over every roof; W3 over the south range to the crag's edge and the lake below. Under both, the Common room places the girls' door (any free stretch from the little door round by the west to the bookcase), and the girls' drum goes into the faces and sections.

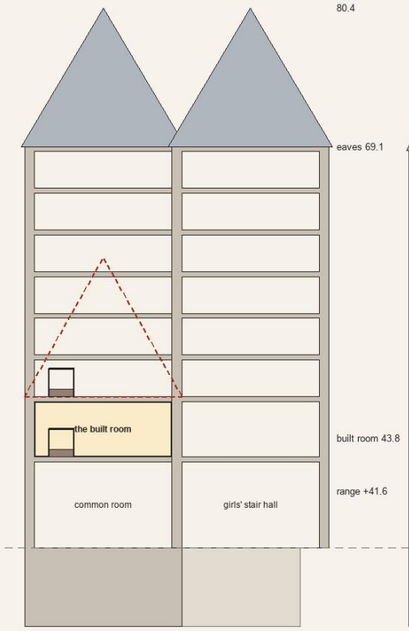

235.1 The built room on top

235.1 (recommended). Seven rooms a stair, a room per year group kept all seven years (CoS 5's sign). The built room goes to the top of the boys' stair, its plan and page unchanged; its floor rises from +43.8 to +64.2 (7.4 to 27.8 m above the common room). The open stair head on the page is right for a top room. Below it, six rooms at 3.4 m storeys (3.0 clear). Moves: the model (version 7), the Dormitory page's one number, its windows' heights; req 225's line (W2's sill +65.3, the beech 22 degrees down). 225's choice holds either way.

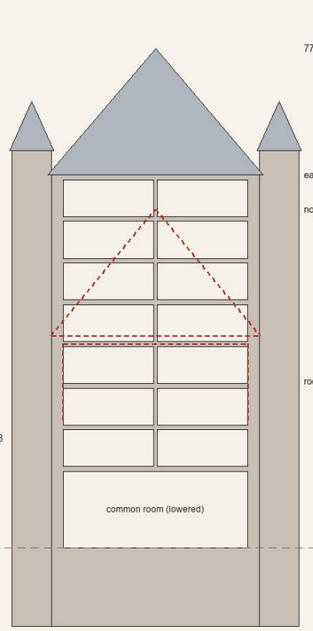

recommended

235.2 The built room at the foot

235.2. The built room keeps +43.8, the lowest of the seven; six rooms above it. Departs from the books: Harry's room is not at the top (CoS 5, GoF 12). The stair must run on up out of the built room, so its page still changes (the stair head becomes a stair going on up). Same heights as 235.1.

Ravenclaw (both options)

Both options: Ravenclaw's common room lowered to +36.4 (my number; proposed), its wider drum split, a boys' and a girls' room a level, each on its own stair from a lobby behind DH 29's one door. Astronomy raised a stage to stay the highest (HBP 27); its classroom with it.

The Astronomy Tower, raised

Hufflepuff and Slytherin, below ground (both options): two passages off the common room's level, seven doors each (proposed)

Slytherin's room stays under the lake (low, CoS 12); Hufflepuff's off the stair down to the kitchens. A level per year down would sink 25 m into the rock; your "levels/space" is met on one level. Heights: the boys' and girls' drums 69.1 to the eaves, cones to 80.4; Ravenclaw 66.8 and 77.1; the Astronomy ramparts 83.2, its stair turret 87.0. DH 31's three highest stay the three.
