Batch 3 drawn: the office, the girls' door, the stair hall, her study, the trophy room, the Great Hall

The Architect, 14 October 2026, for Godric. The ledger's lines 7 to 12 (docs/architect/changes.md), drawn from the castle model, version 19. Red: what changes. It asks nothing.

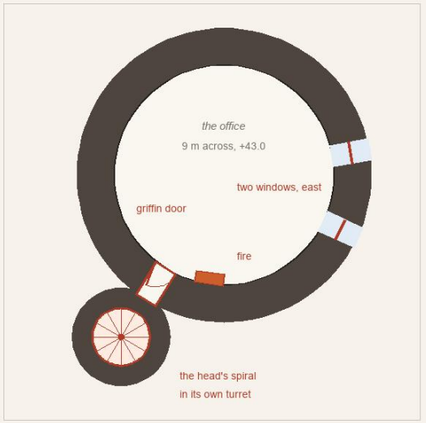

Plan 1, the stair hall's foot to her study, floors marked (1:500), lines 9 and 10

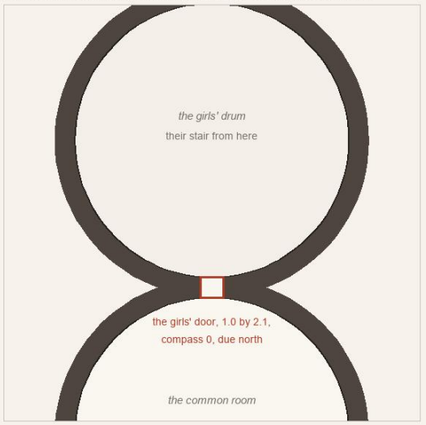

The stair hall cut at x 80, looking east (1:500), line 9

Plan T, the head's tower at +43 (1:250), line 7

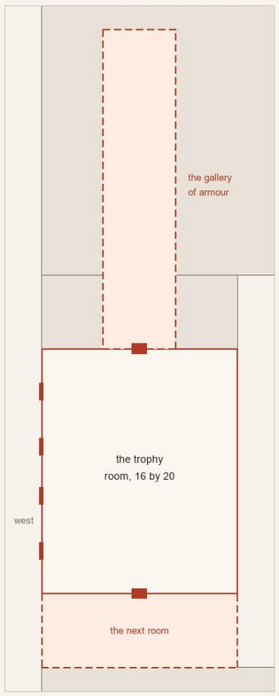

Plan 7, the common room and the girls' drum (1:250), line 8

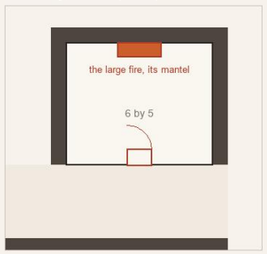

The two halls cut on the doors' line (y 60.5), looking north (1:500), line 12 and a fault found

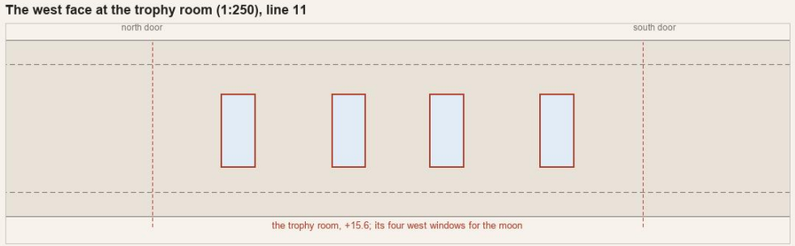

Plan 3 (1:500), line 11

Her study, floor 1 (1:250)

The west face at the trophy room (1:250), line 11

Lines 7 and 8 wait on Godric; 9 to 11 are provisional, Godric to confirm

7, the office (desk interiors-office-level-1013, one level recommended): the griffin door at compass 212 facing the head's spiral, which climbs in its own turret engaged on the tower; the fire on his right as he enters; two arched windows east. Pending.

8, the girls' door (desk common-girls-door-1013): an arched oak door through the shared wall, compass 0, due north. Pending.

9, the stair hall (interiors-stair-surfaces-1013): the banisters, ends flat at a boy's reach (CoS 12); two doorways hidden by a sliding panel and a tapestry, floors 2 and 5 (PS 7); the North Tower's way off floor 7 (PoA 6, 14); the great south window, the lantern.

10, her study (interiors-study-size-1013): 6 by 5 off the first floor's corridor (PoA 5), its large fire facing the door (CoS 18).

11, the trophy room (interiors-trophy-middle-1013): a door at either end, four west windows, the next room, the gallery of armour (PS 9).

Found while drawing, for batch 4

The Great Hall's doors stand in the Entrance Hall's wall at x 68, but the hall's east wall is at 65: 3 m of wall, the broom cupboard in it, and no opening through the hall's own wall. Batch 4 opens it, a passage or the wall moved, with its drawing.

The lantern sits on the massing's hipped roof (eaves +46, ridge +56), which the model does not hold: its stair hall tops out at +41.6, 14 m under the lantern. Batch 4 puts that roof in the model. From the awe stand the lantern is 78 degrees up, past the +75 limit.

No page shows the office, her study or the trophy room yet; the stair hall and the common room are on their shells and pages.
