Question 16: the Great Hall's doors open through 3 m of wall

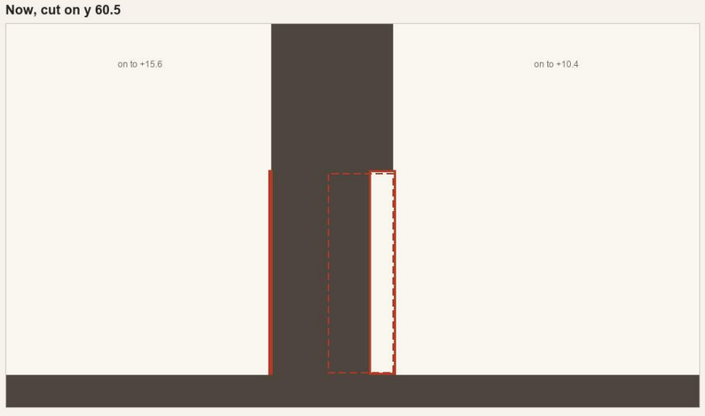

The Architect, 14 October 2026, for Godric. Ledger line 14, found drawing batch 3; the castle model, version 19. Plans and sections at 1:150, the cut on the doors' line looking north. Red: what changes.

0 2 4 6 8 10 m 1:150 at A3 N

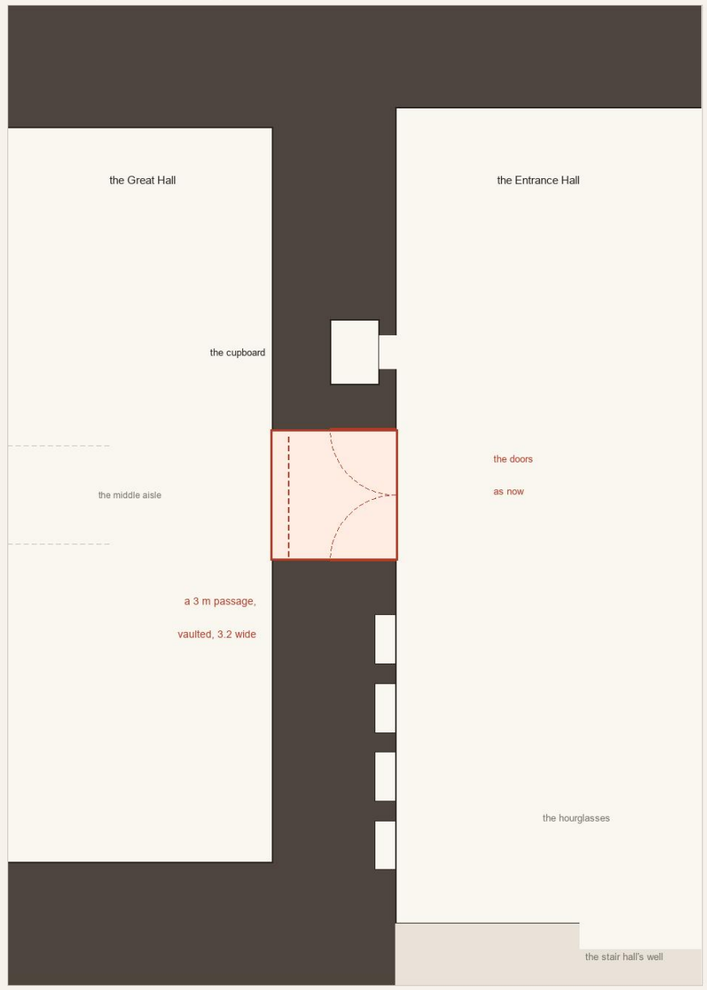

Now: the doors stop at the cupboard's wall

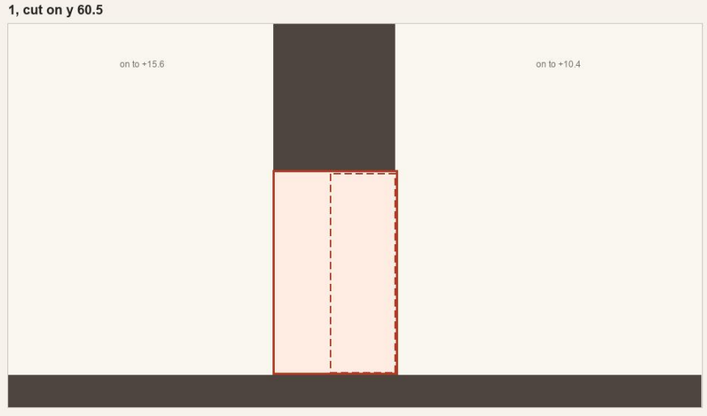

Now, cut on y 60.5

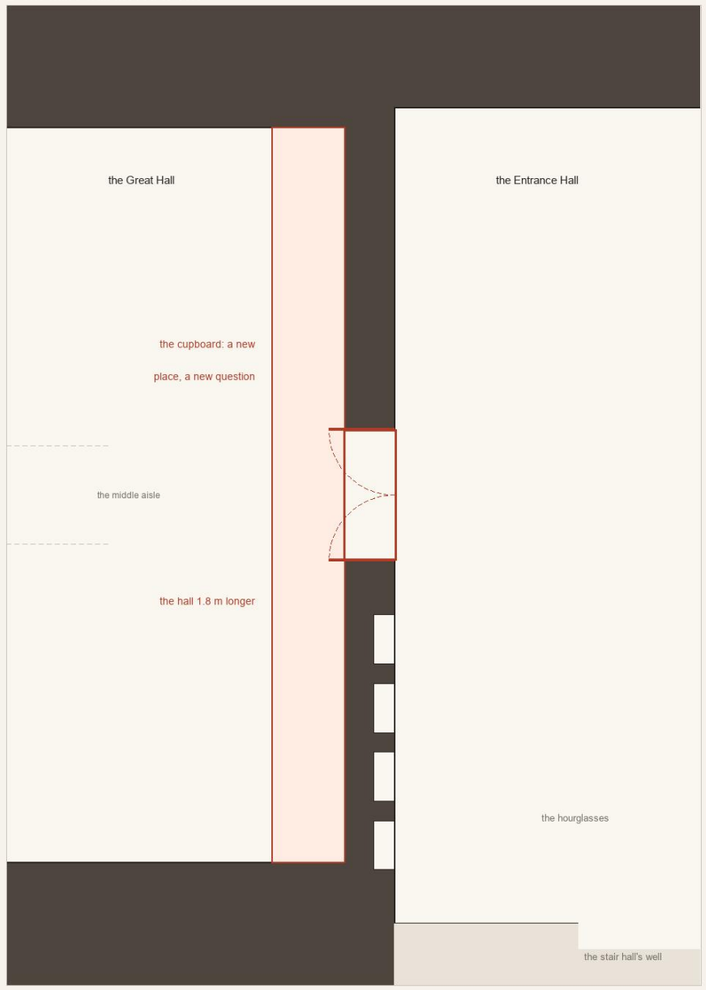

1 The 3 m stays: a vaulted passage

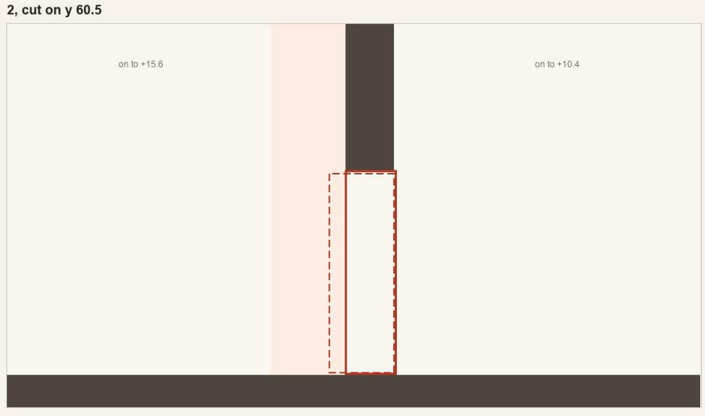

1, cut on y 60.5

2 The hall's wall moved to 66.8

2, cut on y 60.5

recommended

1, recommended. The 3 m stays and the doors open into a passage through it, 3.2 wide and vaulted, the leaves where they hang now in the Entrance Hall's face, swinging in. Your 14.1 cupboard and the hourglass niches stay; the hall stays 50 m, so Interiors' tables, the doors' stand at x 62 and the lane of sky down the aisle stay as placed. A castle's walls run this thick (a keep's, 3 to 6 m); you pass under 3 m of stone before the hall opens, and its sky opens with it.

2. The hall's east wall moves to 66.8, a 1.2 m wall (the niches need 0.5 of it), the hall 1.8 m longer. The cupboard loses its place and needs a new one (a new question), and Interiors' tables and the doors' stand move with the wall.

Either way the shell's Great Hall then gets its doors stand and its start (req 315's +80). Nothing spent; nothing on any page moves for 1.
