Batch 7: the North Tower's climb and Divination; the boys' stair's doors; Transfiguration's desks

The Architect, 15 October 2026, for Godric, on the castle model, version 28. Ledger lines 26 (req 393), 33 to 38 (req 235), 21's desks. Nothing spent.

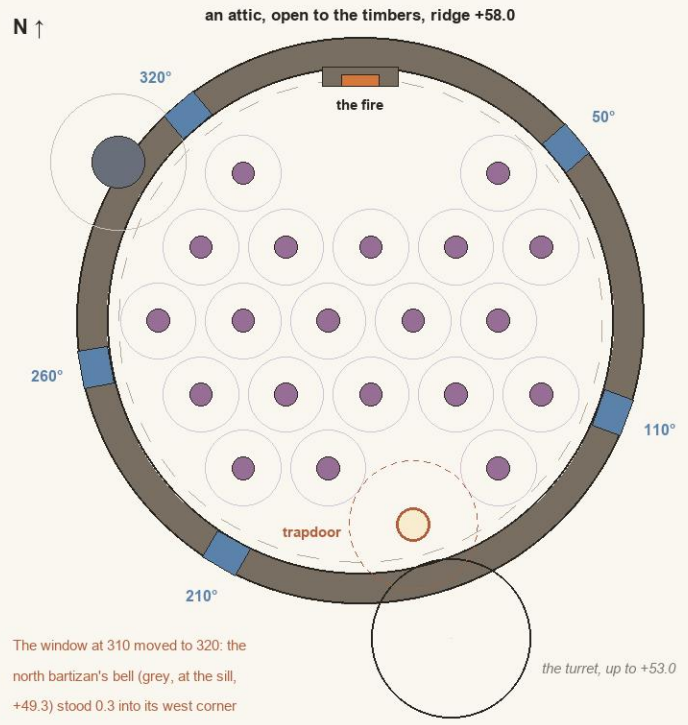

A. The climb: the landing storey, +45.4

1:200. The spiral from floor 7; the landing inside the drum; the passage on 7, dashed

B. The Divination classroom, +48.4

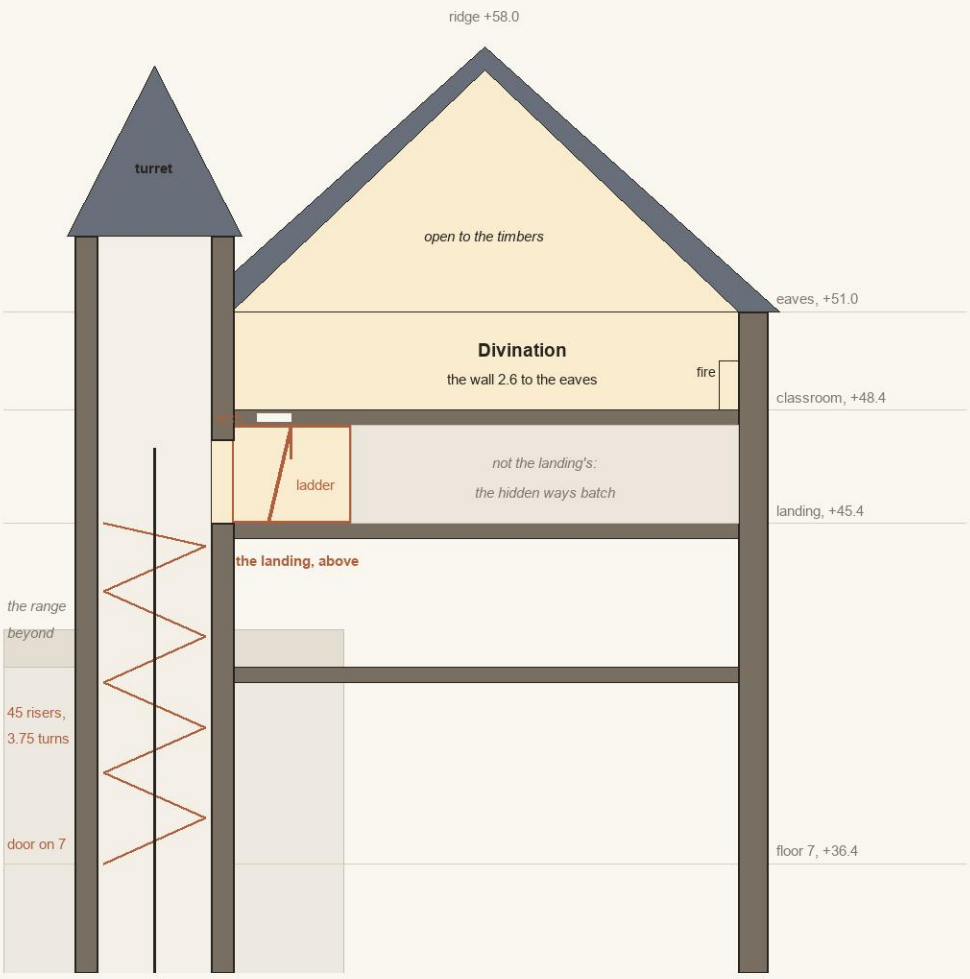

1:200. Interiors' twenty tables, crammed and staggered, no aisle

The window at 310 moved to 320: the north bartizan's bell (grey, at the sill, +49.3) stood 0.3 into its west corner

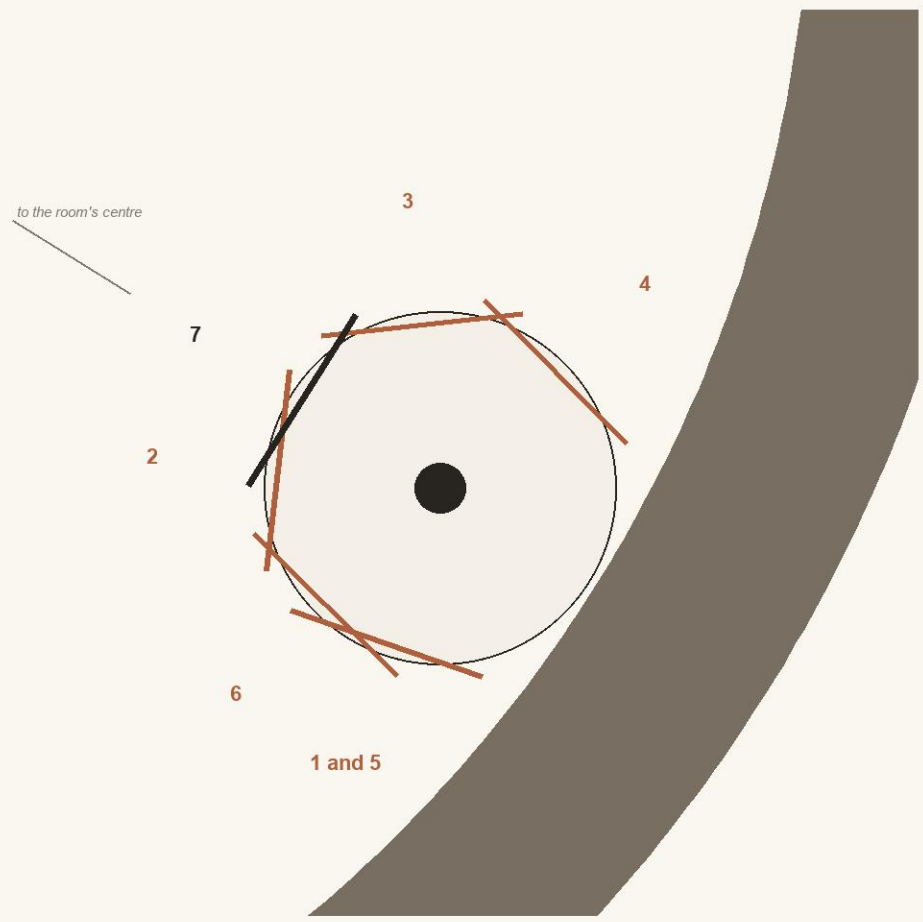

C. Section through the newel and the drum's centre

1:200. South on the left; the range beyond

D. The boys' stair's six landing doors

1:30 at the newel (the suite's frame). Clockwise up, 14 a turn; a door a room (PoA 13)

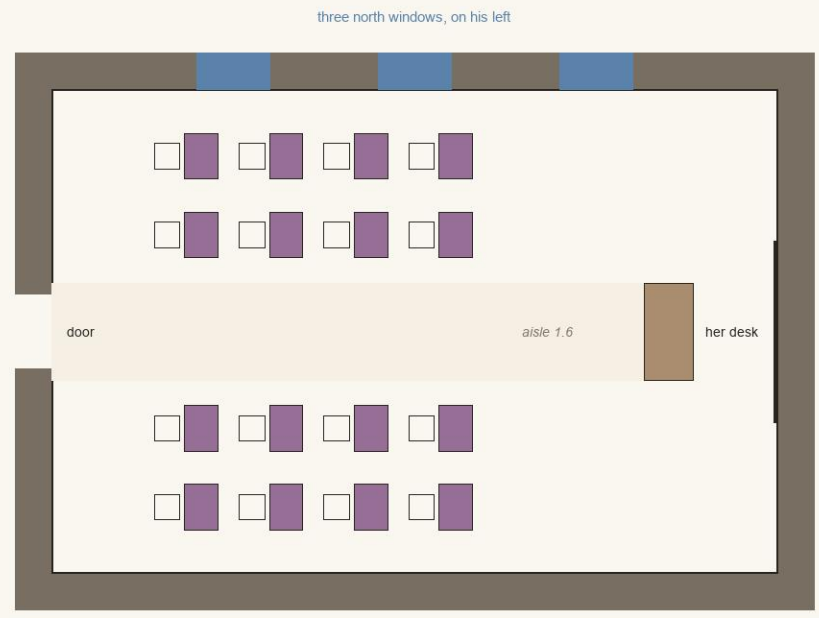

1: the room at +43.8
2: the room at +47.2
3: the room at +50.6
4: the room at +54.0, a step up inside
5: the room at +57.4, two steps down inside
6: the room at +60.8
7, the top: dorm-door, built (+64.2)

Each opens into its room, hinged on the jamb the stair comes up from (on the left seen from the stair), so the room opens to a boy coming up. At 4 and 5 the floor's own tread faces the drum's wall, so 4's door is a tread below its floor and 5's two above. Each carries its year's sign on the stair side (the Dormitory's, built later).

recommended: the climb as drawn

E. Transfiguration: sixteen desks, four rows

1:125. Interiors' numbers in the model's 8 by 12 room: it fits

The desks 0.75 by 0.55, 0.55 between a pair, 0.43 to the aisle, 0.73 to each long wall; the rows 1.4 apart, each chair 0.42 deep; the back chairs 1.7 from the back wall, clear of the door's 1.2 leaf; 2.85 clear before her desk for the pig (PS 8 L2740). A cited note, no ledger line: the room needs no change.

Notes

The climb first: the spiral's newel stands outside the drum, so the trapdoor (3.2 m from it, inside the drum) cannot sit at the spiral's top. The landing comes inside the drum on the storey below the classroom, the spiral's top step reaching it through the drum's wall by an open arch, the trapdoor in its ceiling (PoA 6 L15268: a tiny landing, no doors, the trapdoor overhead).

In the model now, not the faces tool's alone: the North Tower's eaves 51.0 and ridge 58.0; the classroom's floor the eaves less a 2.6 wall, +48.4; the landing +45.4, the ladder 3.0 up through the slab; the spiral 45 risers from floor 7, 3.75 turns in its 4.2 m turret; the passage to it on 7 at the range's east end.

Two changes to the schedule's asks, both the building's: the fifth window at 320, not 310 (the north bartizan's bell would stand 0.3 m in front of its lower west corner); the trapdoor hinged on its north edge, not its south, so a boy climbs facing north and comes up facing the fire, as the schedule has him.

The tables: every group (1.0 m round each table) inside the shelves' ring, the trapdoor's 1.25 m clear kept; the fire and the windows clear of the stair turret (bearing 164).

Found for the hidden ways: the drum round the landing and below it, and the turret below floor 7, are drawn nowhere inside yet.
